The other terminal for IBM and ICL mainframes

FERRANTI

NEWS IN BRIEF

DoE reply on US minis.

ONE of the two MPs who wrote to the Department of Employment about its purchase of US-built minicomputers and printers from Interdata rather than Oligo for disseminating job vacancy details in London and Glasgow (CW, August 11) has received a reply from the DoE. In its letter to John Wekeham, Tory MP for Maldon, Essex, the DoE pointed out that Interdata's parent company, Perkin Elmer, has manufacturing establishments in the UK which employ about 700 people building laboratory equipment.

French Bill

THE draft Bill on data protection prepared by the French Cabinet last year (CW, July 22, 1976) is now being scrutinised by the French law commission. The Bill will be presented to Parliament early next month.

TSB finalists

FINALISTS for the major contract to replace the 2,000 or so terminals used by the Airtel Group of Trustee Savings Banks are resident supplier Olivetti, together with Burroughs, Oteasab and Philips. Univac is to supply an I100/82 mainframe to replace the ICL System 4 mainframe at the centre of the network (CW, April 7).

Japan sells to Iraq

JAPANESE sources say that Toshiba has sold a mid-range Acos 77/80 mainframe to Iraq. The Acos 77 line is based on Honeywell Level 68000, and the 800 is comparable in power to a 88/40 or 68/60. The sale to Iraq is the first of a series of sales to the Third World countries.

REDEMPTORIST PUBLICATIONS of Chawton in Hampshire, Catholic publishers and booksellers, are pleased to report the installation of a B.C.L. Molecular 18 Mk 111 computer that has been delivered exactly on time and in accordance with contract.

The Management Board of Redemptorist Publications, who have been previously using a V.R.C., wish to express their sincere and grateful thanks to BUSINESS COMPUTER (SYSTEMS) LTD., of Portlaid in Sussex for the way and manner in which the equipment has been installed and commissioned; their experience and professionalism has resulted in a total problem free start. Our thanks also go to B.C.L. for the time and energy that has been spent in determining our software needs and upon the work completed on the system design and programme specification—in our experience this has been superb!

INDUSTRIAL MAINTENANCE SERVICES is also thanked for the excellent job that they did in preparing our accommodation. A lesson for all FIRST TIME users of computer users is that you will have to go a long way to better this experience!

This unsolicited advertisement is wholly paid for by Redemptorist Publications.

Who cares about computers?

THE general public is overwhelmingly indifferent to computers and their effect on everyday life. Or, at least, the French public is. For in a survey by the French monthly magazine *Ordinateurs*, well over half those interviewed were "don't know" when questioned whether computers were useful, useless or dangerous in areas like education, medicine and privacy.

The first two questions were aimed at finding out how familiar people were with computers, and the answer was "not vary." Only 7 per cent said they had seen a computer working, 54 per cent said they had not, 17 per cent thought they had, and 22 per cent did not know. More had seen a terminal, but here again it was only 14 per cent.

Ordinateurs wondered if many of the "horror stories" said about computers were merely due to the fact that few people knew what one looked like.

The next two questions covered the use people made of computers at work. Only three per cent said they had a machine to do with computers every day, and seven per cent said they were involved frequently. A massive 81 per cent said "never" or "don't know."

More than half were again "don't know" when asked if computers were useful to their job. About 16 per cent thought computers were useful and 14 per cent useless. The survey found that younger people tended to think the computer was useful, while the older ones tended to think of the computer as a threat to their jobs.

The two per cent who thought computers were dangerous were mainly women.

A high percentage, 74 per cent, answered "never" and "don't know" on the question of whether their private lives were affected by computers. But 13 per cent said they were affected, giving computer printed bills as examples. And only seven per cent thought computers useful in their private lives while 23 per cent thought them useless. The majority, again, were indifferent.

Thirteen per cent were concerned about the effect of computers on different areas of life. Computers were seen as useful to humanity by 23 per cent, and useless by 10 per cent; seven per cent thought them useful in health, six per cent useless and seven per cent dangerous; and nine per cent thought them useful to education, 18 per cent useless and 11 per cent dangerous.

Ordinateurs summed up the survey saying, "We must humbly conclude that the public is little concerned about computers. This is normal, but at the same time worrying: normal because the computer is only a tool, worrying because public ignorance could allow the growth of dangerous embellishments such as those already surrounding nuclear energy."

OECD call to control data use

THE emphasis of legislation protecting personal data should be on the use of the data rather than the actual processing. This view was put by UK speakers at an international conference on trans-border data flow, organised by the Organisation for Economic Co-operation and Development in Vienna last week.

"The collection and storage of personal data, of itself, harms no one: only when it is used should we become concerned," said David Finkberg, director of the National Computing Centre. "Therefore it is at user that legislation should be directed."

Alan Benjamin, director-general of the Computing Services Association, said control of the use of data gave protection against unauthorised new uses, provided protection regardless of where the work was done and, above all, was enforceable. Benjamin called for the setting up in each country of a statutory body which would issue licences to end users for specific uses of data.

Benjamin added that the authority should also grant certificates of security to organisations running computers. But, he went on, "Laws which attempt detailed regulation in a fast developing environment will be subject to technological loopholes."

One reason for having a licensing authority was that the general public would find such a body reassuring, said Benjamin.

Finkberg said that it was vital for countries to reach international agreement on data protection legislation.

"But legislation for controlling disclosure of data varies enormously from one country to another. This will become a major obstacle to data flow and communications unless we can harmonise national programmes and agreement on international standards."

Harmonisation is certainly needed to support one of Benjamin's suggestions: "Before issuing a licence to a user, the data protection authority shall be required to satisfy itself that the processing will be carried out to an acceptable level of security. In this task the authority may accept the assurance of quality from the data protection authority in the country where the processing is carried out."

Now that the computer industry has aired its views, the Council of Europe is meeting this week to consider a draft international treaty which could lead to certain minimum protection standards around the world.

Benjamin added that the authority should also grant certificates of security to organisations running computers. But, he went on, "Laws which attempt detailed regulation in a fast developing environment will be subject to technological loopholes."

CII-HB to build Level 6

IN what is seen in part as a defensive move against possible nationalisation of CII-Honeywell Bull in France, Honeywell is planning to extend the power of the Level 6 minicomputer line to match most of the French-built Level 64 series. The company plans a Level 6/50 series, which like the 8/30 and 8/40 will have substantial software compatibility with the US and Scottish-built Level 88 mainframe line.

Meanwhile CII-Honeywell Bull has announced that it is to manufacture the three models in the 8/30 and 8/40 lines at its Belfort factory. CII-HB has a substantial multi-year contract for minis with the leading French manufacturer SEMS, but the decision to build the US-designed minis in France will make it harder not only for SEMS but also for the other French minis makers, Intertechnique and SPENA.

IBM 370/145 for lease

- * 512K Available November
- * £5400 per month — 4-year lease
- * lease period negotiable
- * upgrade and replacement without penalty
- * delivery and installation included
- * maintenance guaranteed

Ironman's double blow for UK

CONTRACTS for the development of prototype computers for the US Department of Defense planned at a conference at the Academy of Sciences in Leningrad, which is the centre of the project.

Three of the four contracts have been awarded to pay US-based developers, with one in the direction of Europe. The UK's last candidate for these language, Algol 68, has been effectively excluded.

Following publication of the "Ironman" specification, the ideal features for a language to be used in the US and services, the DoD selected PL/I and Pascal, to serve as a base for the planned languages and requested detailed proposals.

Unexpectedly, all proposals selected for implementation were based on Pascal. The successful candidates are CII-Honeywell Bull, the Stanford Research Institute and International Software Houses with a standing record of work for government departments.

Pascal is a highly structured, Algol-related language developed by Niklaus Wirth at Zurich on the basis of collaboration with the Professor Tony Hoare.

Briefing

Joint CDC-Soviet project

THE Soviet Union has agreed to accept an offer from Control Data for the joint development of an advanced scientific computer. The agreement was made following a conference at the Academy of Sciences in Leningrad, which is the centre of the project.

According to Soviet computer expert Professor Mikhail Ignatiev, this system is to be built on "new technological principles" that could greatly outperform existing systems. He calls it a "reversion computer."

The proposal is likely to be closely scrutinised by the US government, which recently vetoed a bid by CDC to sell a Cyber 76 to Russia.

More on CDC in Russia — page 40.

One-day strike

A ONE-DAY token stoppage by ASTMS members at Lupton Industries, Redhill, last week followed the non-payment of an agreed 5% Phase 2 increase. A company spokesman said that the payment was delayed because of staff illnesses in the DP department, but added that a back-pay would be fully paid at the end of this month.

Unexpectedly, all proposals selected for implementation were based on Pascal. The successful candidates are CII-Honeywell Bull, the Stanford Research Institute and International Software Houses with a standing record of work for government departments.

Pascal is a highly structured, Algol-related language developed by Niklaus Wirth at Zurich on the basis of collaboration with the Professor Tony Hoare.

MPs call for benefit fiddles check

A CALL for greater use of computers to cross-check social security information has come from a watchdog body of MPs in an investigation of overpayments of £10.8 million social security benefits in 1975-76.

The Committee of Public Accounts, in its report on the overpayments, says the main safeguard against fraud and mistakes is a check of details given by benefit claimants.

"We stress the importance of taking all reasonable steps to ensure that there are no categories of cases where appreciable and avoidable overpayments are occurring. We therefore urge the departments to pursue their investigations to ensure that full advantage is taken of the facilities offered by computers to cross-check and supply information to the point at which a claim is decided."

RESULTS OF CW SURVEY...

Doubts on IBM sales boom

THE anticipated sales boom in medium/large-scale IBM-compatible mainframes and the new IBM 3033, 3032 and 3031 systems, could be smaller than expected in the UK — at least for a year or two. That is the broad conclusion of a Computer Weekly survey of a dozen large-scale IBM users, taken just before this week's expected public announcement of the 3032 and 3031X (CW, September 29) and news of the first UK order for the ICL Advanced System range of IBM processor replacements (see below).

The 3032 and 3031 are expected to be announced this week after Computer Weekly has gone to press.

The 3030 series of machines appears to have arrived at the wrong moment in the development cycle of most of the installations contacted by Computer Weekly, and, at this stage, none would go on record as saying that they were planning to place an order, even just to get in the queue.

Lloyds Bank placed an order for four 370/168s about two years ago, and took delivery of the second two earlier this year. As a committed IBM user, the bank might have been expected to switch to 168s to 3033s, but has no plans to do so for some time.

"We are in the middle of a monumental transfer plan with the move into our new Bankside computer centre, and we won't be looking for any change of mainframes for at least two years," said a spokesman.

"When we do start looking, we'll be looking for a 370/168 replacement for the 370/168. The AS/5 is now being installed at UCSL's centre at Burgess Hill, Sussex, where it will be upgraded to an AS/5-3, equivalent to a 370/158-3, early in 1978.

The initial configuration will have a two Megabyte main memory and 18 200 Megabyte ICL disc drives. UCSL says that its decision to buy from ICL was based principally on cost/performance, and involved extensive comparative studies. UCSL said that it was interested in IBM's 3032 replacement for the 168 but was not prepared to wait for delivery.

UCSL already has three IBM 360/65 mainframes, one at Burgess Hill and the other two at its Watford centre. None of these will be replaced by the ICL system.

Computer salesmen are at the head edge of the computer business and from this week they have their own special spot in Computer Weekly — on the inside back page. Turn to page 39 for the first Sales Bill by The Trader, a man with a wealth of selling experience. Operators have had their regular CW Up Spot for many months now, and this week Bernard Allen takes over this regular feature. Maal Barnard on page 11.

MARCOL expands COMPUTER OPERATORS Division

Having successfully supplied operators to our existing clients we are now expanding our operations division throughout the U.K. and Europe. Our new Divisional Manager Pat Eagling explains her new approach.

"It is my aim to establish an operations division, staffed by professional contract operators. Marcol are not interested in the body shopping approach that has given many companies in our industry a bad name. We feel that a good operator is worth his weight in gold to an operations manager. We expect our operators to be appreciated for the work they do and to be given co-operation and assistance by the whole of the Data Processing Department. In return our staff will be capable of working with the minimum supervision and will make a valuable contribution to the smooth running of any computer department."

Tektronix diversifies

MOVING for the first time beyond the provision of hardware, Tektronix has introduced a Finite Element Modelling package that can be run either online or offline from a host computer, and can format model data into a compatible form for all finite element analysis software available.

Developed to run resident on the company's 4081 Interactive graphics terminal (CW February 3), the package has been designed specifically for applications in structural analysis in mechanical and civil engineering. Called FEM 101, it can operate in any one of four modes: as a dumb terminal operating directly online to a host computer, as an intelligent terminal, as a workstation operating offline except for number crunching, or as a stand-alone, with no interaction with a host computer.

The package is constructed in three main sections. The first is a data loader, which allows the loading of an existing bulk data file from a host computer or other source for editing purposes. The second section is the model generator, which allows a node and element generation and editing in three dimensions, and the third is a bulk data formatter, which allows model data to be formatted into a card image file that is compatible with the particular finite element analysis package to be run.

Without recourse to a host computer, the package allows the user to rotate through three axes, zoom in or out on assigned sections, produce cross-sections, and produce hard copy print-outs of the display. It is also possible to obtain a status report on the modelling process at any time.

Our picture shows FEM 101 in action on the Tektronix 4081 system. It is being applied to turbine blade design with three dimensional rotation.

COMPUTERVIEW

Who would cry if the BCS should die?

THE British Computer Society is
supposed to be the body repre-
senting computer professionals,
but it has failed to establish
unequivocally that there is such
a thing as a computer profes-
sion.

And in recent years, beset by
financial problems, the BCS
seems to have lost its way.
Its commercial activities, like
the Datafair conference which
ends today (Thursday), could
have been organised by any
commercial, rather than profes-
sional, body and its "technical"
activities lack the vigour of the
late sixties and early seventies
when Datafairs were more the
British forum for technical and
professional discussions, and
activities like the Advance
Programming Group conferen-
ces on Databases and Job
Control Languages were mile-
stones in their fields.

This week's Datafair has had
an interesting theme — The End
User — and an imaginative
programme. But it has little that
uniquely identifies it as an event
to be associated with a profes-
sional body. Commercial confer-
ence organisers, like Infotech
and Online, are constantly
organising events of a similar
style.

The emphasis on commercial
survival for the BCS has also led
to that fear among some BCS
members that it should not
become too associated with the
term "academic".

But the BCS, as a professional
body, is nothing if it is not
academic; if it is not concerned

primarily with theory and with
technique.
By their very nature, these
techniques are, of course, con-
cerned with the "end user," just
as the medical profession is
primarily concerned with curing
patients.

In an interview with Compu-
ter Weekly (page 14), Professor
Paul Semet quite rightly ques-
tions the validity of the terms
"academic" and "commercial"
when used in relation to BCS
members.

The distinction, as he points
out, is more between those
involved in the development of
computing techniques and those
who apply the techniques. And
Professor Semet is to be com-
mended for recognising the
contribution that each side can
make to the other.

But surely it is time that the
BCS once again unashamedly
put the accent on "techniques"
rather than the applications
side. Organisations like the
National Computing Centre and
Data Processing Management
Association have a more specific
"user" role.

In the long run, if the BCS
is to grow in influence and in
membership it must define for
itself a far more consistent and
bolder approach.

It should also try to move
away from an overdependence
on "adapting" its public image
annually to the character of the
President.

The next few years for the
BCS will be crucial.
They now have the money to

buy a new headquarters and the
immediate threat of financial
disaster has been removed.

But if it is to prosper, the BCS
membership must grow sub-
stantially. To do so it must
clearly show that it has a unique
and valuable role to play in
DP.

In the branches and specialist
groups, committees and work-
ing parties, the BCS has already
achieved a great deal and made
a major contribution to comput-
ing activity.

But if the BCS died tomorrow,
would it in any way affect future
computer developments?

Manufacturers would con-
tinue to manufacture, end users

would continue to end use,
programmers would continue to
program.

Could one say that the quality
of all those activities would
diminish if there was no BCS?
That there would be no strong
impetus to improve technique
and standards without the BCS?

The answer to those questions
should be that, without the BCS,
the standing of the computing
profession would drop.
At present, however, the BCS
should be hard put to argue this
case. Its future policies should
aim at vigorously demonstrating
the unique value of the BCS and
attracting a large number of
new members.

STANDING back from the small
business machine could be
dangerous. The DPM could well
trip over several assorted micros
and minis in the process.

For once, the current crop of
computer exhibitions have got
the theme right. All concentrate
on "Thinking Small" — a true
reflection of the current DP
marketplace. In fact this
particular market is only small
in its product. Otherwise it is
impressively large and threatens
to engulf all in its path. Most
DPM's would agree that small
business systems do not grow:
they multiply.

In approved parallel mode,
there are now numerous train-
ing and education sessions
concentrating on getting the
best out of the users' small
business system, the best in this
case being as much as possible
plus an optimistic margin. Any
day now, a protection society
will have to be established to
defend the small system from
abuse. Perhaps known as ISM,
Institute of Small Machines, the
objectives will (in keeping) be
limited in size: to protect the
mini or micro system from
abuse, misuse and general
aggro.

Unlike their larger comrades,
small business machines are
expected to continue operating
through thick or thin — or
rather heat and cold. In condi-
tions which most self-respecting
mainframes would hesitate to
tolerate and would quickly blink
their way to a halt.

The Institute should aim to
promote an attitude among
users of care and attention for
the small machine. It should
emphasise that the occasional
wipe-down with an anti-static
rag does not constitute an
acceptable maintenance rou-
tine. Accommodation also usu-
ally leaves much to be desired. It
should be suitable for both
operator and machine. Storing
the small machine in an isolated
alcove or behind the stationery
cupboard, should not be encour-
aged; nor putting it in the
centre of a draughty passage.
Often the sitting considerations
are limited to the proximity of a
suitable power plug.

Mainframes, in comparison,
have a sheltered life. The
allright indication of an ail-
ment brings a large dose of
attentive servicer. Preven-
tive maintenance is logged and
monitored even more closely
than the operators' shift allow-
ance. All this plus an environ-
ment which would be the envy
of any medical laboratory.

The new Institute must give
top priority to educating the
user. Despite what the sales
literature might suggest, small
machines are not totally suited
to processing long name/ad-
dress runs on to sticky labels.
Gumming-up the works will be
the main achievement. Simi-
larly, the small system should
not attempt to operate in a databank
mode. Processing an historic
record print run will result in the
machine featuring in the com-
pany's historic cost accounting
debt.

As an urgent task, the Insti-
tute should promote some stan-
dard rules. Suggestions include:
● Coffee supplies to be limited
to the operator;
● The system should not be
used as a chess-lab except at
lunchtime;
● Untrained operators should
not be allowed near the machine
until they have passed an
aptitude test.
Only then will the small
business system have a
chance of survival.

Interactive Cobol on Inforex 7000

MULTI-USER Interactive Cobol
is one of the most important
features of the Inforex 7000
terminal system which has now
been introduced to the UK
market after being launched in
the US early this year (CW,
January 27).

John Evans,
managing di-
rector of In-
forex UK, stresses
that the
7000 is not a
small business
system but
was designed
and evolved
for distributed
processing,
and will be
used as such. Data entry, file
management and data commu-
nications, as well as data
processing, can be handled
simultaneously by the 7000,
although data entry will be the
most important function at most
sites.

A 7000 configuration compris-
es a master display terminal
containing the CPU which is a
16-bit microprocessor, and up to
seven local or remote slave
terminals. These can be either
displays or serial printers. A
virtual memory feature handles
dynamic memory management of
non-resident systems and user
software and provides each user
with 20K bytes of storage on a
demand-paging basis.

Inforex points out that the
7000 software is designed to
support high-level multi-user
interactive Cobol. This can be
applied in real time so that data
can be processed as it is being
keyed by the terminal operator.
Other users' Cobol programs
can be executed simultaneously.

Altergo buys Consort

YET another of the consultancy
activities of Altergo has been
given its own specialist division,
this time as the result of a
takeover. Consort IMIS, a
company specialising in finan-
cial applications software, is
now to be known as Altergo
Financial Management Systems.
Consort was founded in 1971
and its main areas of activity
have been in planning and
budgeting consultancy. An out-
come of this is Budget 8, a
package designed to help the
accountant or financial director
with budget and cash-flow
calculations.

Budget 8 will form part of
Altergo Financial Management
Systems' package repertoire,
and will be complemented by
Spiral, an appropriately titled

package for inflation accounting
on fixed assets. Spiral was
developed by Altergo's Business
Systems division.
Both packages are designed
for IBM equipment. Budget 8
will be converted for IBM's
System 3, System 32 and 34 and,
most interestingly, Series 1.
Altergo was one of the first UK
firms to take an interest in this
machine.

The new division will also
take over much of the finan-
cially-oriented consultancy pre-
viously handled by other Alter-
go divisions. Some clients have
already been gained.

The division will employ
Consort's existing staff, and will
be headed by its managing
director, Hugh Wingfield-Hayes.

The happy managers

MANAGERS in the European
electronics industry are happy
with their lot, according to the
Swiss-based job agency
Korn/Ferry International.
01200 job applications received
from air countries in the last
quarter of 1976 and the first
quarter of this year, only 8%
came from electronics execu-
tives, while 32% came from

executives in financial services
and 18% from those in consumer
product firms. The percentage
was slightly higher, at 7%, when
it came to marketing and sales
executives.

Korn/Ferry found that the best
salaries were enjoyed between
the ages of 40 and 45, although
this was also the period of
greatest unrest.

UK role in PL/I standard

PREPARATIONS are under way
for the expected large UK role in
PL/I (CW, June 10, 1976). A
meeting is to be held in London
on October 24, to brief the
delegation to the International
Standardisation Organisation's first
meeting on the topic, in The
Hague during November.

After some delays, a joint
ANSI/European Computer
Manufacturers' Association
standard was approved earlier
this year. The ISO standard will
be based on this, but could
possibly involve considerable
alteration.

One point on which UK
concern has already been ex-
pressed is the definition of
subsets of this large and multi-
disciplinary language.

ICL now has world rights for TPS

ONE of the most successful independent
teleprocessing monitors for ICL machi-
nes, Telecomputing a TPS, has been
taken up by ICL for marketing in the UK
and Europe.

This puts users in these countries on a
par with those outside Europe, to whom
ICL has been supplying TPS for almost a
year (CW, November 4, 1976).

The agreement with Telecomputing
gives ICL non-exclusive world rights to
supply TPS for use on ICL's 2803 and 2804
machines, and on the larger 2805

running under DME. Telecomputing will
continue to sell TPS for these machines
alongside ICL and will retain sole rights
to the product on 1900 machines.

Telecomputing has gained its first
client with a 2803 DME system, Dobson
Park Industries, of Wigan. The software
house is already committed to catering
for native made 2800 with a product
called TPS Care, which preserves the
user, terminal and application program
interface characteristics of TPS, while
using standard 2800 TP software.

The 2803/4 sector of the TPS market is
becoming increasingly important, and
now accounts for about half of the
product's 60-plus users. ICL appears far
more interested in obtaining a share of
the TPS market on its newer machines
than on the 1900 series.

But, as Telecomputing's director
Bernard Panton told Computer Weekly,
"We want to be left with exclusive rights
in some sector of the market."

Apart from its own sales of the main
TPS software, and royalty income from

ICL sales, Telecomputing expects con-
siderable opportunity for follow-up sales of
the TPS Advanced Terminal and Directory
Access feature of TPS, to which it
has also retained rights.

ICL, by marketing TPS for the DME
environment, could be setting itself a
problem with its 2800 users. On
transferring to VME/B or K, these could
see a move to TPS Care as preferable to
entirely ICL software, unless ICL
produces a suitably straightforward
conversion aid.

This system consisting of a Perkin Elmer gas chromatograph and a Vickers bar code reader, is speeding the analysis of motorists' blood samples submitted for alcohol tests at the Metropolitan Police forensic science laboratory. The bar code reader reads information about the sample while it is being analysed, and the two sets of information are sent to a minicomputer. This produces a report which is used in court.

Exciting things happen with Prime Computer

With 24 hour working and 20 tons of rock removed with every shovelful,
Taylor Woodrow need their Prime computer to optimise open cast
excavation — profitably. If your business has requirements as diverse as
structural analysis, vehicle route planning and financial project control,
Prime has a computer in its range to suit.

and The Coach House, 173 Shear Lane, London SW14 8NA
Telephone Bedford 0234 65121 or London 01-878 3945

DOWNTIME

MY, PROFOUND!

MY Russian is non-existent, but I'm told the warning on the above printout, produced for Melchior Peltu by an M-4030 when he visited the International Engineering Exhibition in Brno, Czechoslovakia, reads, "Watch Out!"

It is, I'm relieved to say, the only example of computer graphics using the Cyrillic alphabet to come my way since I asked for examples on August 28.

My thanks to all those readers who responded — my office could be papered with the samples sent, although not (for lack of space) this column.

I was interested to learn that Bristol University's computer centre has a library of over 100 such pictures, and aims to build a comprehensive collection. Steve Fisher, senior operator at the centre, writes that his group would be pleased to be in touch with anyone who can supply source programs for further pictures (the university's mainframe is an ICL System 4/76, which is networked with other universities' System 4s and the 2880 at Bath), and would pass such information to others. The group is also compiling a library of computer games, and would welcome additions. Steve's address is: University of Bristol Computer Centre, University Walk, Bristol.

CHESSLAB by DONALD MICHIE

Machine strategies

LAST Chesslab (CW, September 22) ended with Russia's program Kalissa poised on the brink. If she had responded to Duchess's queen check by 34... K-N2, creating the position below, could mate have been forced by White?

The neat sacrificial sequence which Kalissa spotted (and side-stepped in the actual play by the last-ditch move 34... R-K1) goes: 35. Q-B8 ch! K x Q; 36. B-R6 ch. K-N1 (or B-N2); 37. R-B8 ch. Q-Q1; 38. R x Q ch. R-K1; 39. R x R mate.

Five moves make 10 ply. Kalissa, running on the IBM 370/188, as at Toronto, searches to depths varying from 7 up to 12 in quiet variations, more in forcing sequences. So it is not in any way surprising for her to find this one, and the same

almost certainly goes for Duchess.

But since none of the chess-masters who were present spotted it, the "blunder" K-N2 might have offered best chances against a human expert!

The machine-versus-human contrast was heightened by a happening outside the official programme. International Master Hans Berliner was matched against a database containing an error-free end-game strategy for king and rook against king and queen. Its author, Ken Thompson of Bell Labs, was one of the two programmers of Bella, which ended the championship in fourth place.

Thompson has computed an exhaustive solution to the KQKR end-game and stored it on disc in the form of a look-up table of optimal continuations for all legal positions.

The complete space comprises approximately 2 million White-to-move positions and an equal number of Black-to-move positions.

Berliner was invited to play the queen's side against the database in consultation with International Master Lawrence Day.

The KQKR ending is tricky, but it is known to be a forced

win for the queen's side from general position. The assumption is that a strong master should be able to handle it. Yet Berliner found to his surprise that he could not win against the machine.

The machine conducted its defence in a style quite new to him, with manoeuvres which were counter-intuitive from the point of view of a human defender yet efficacious for maximally delaying defeat.

These manoeuvres frequently ran counter to the precepts of the chess books, which advise the rook's side, for example, not to allow separation of the rook from the king — a rule of thumb against White's bringing off a sequence of checks to build a skewer attack on the rook.

Hence the machine's play had the masters floundering in "unnatural" territory in which they repeatedly wandered from.

the winning line.

The discrepancy between the defensive strategy implemented in Thompson's database and the strategy recommended in the books is easy to explain.

The database strategy has been generated under no other constraint than that it be objectively optimal, ie that it maximise the length of the forcing path leading to defeat.

The book strategy, on the other hand, has been prepared under the constraint of an added requirement, namely that it be feasible for a human to memorise, and also not require excessive calculation for its application in across-the-board play.

Could there be a machine methodology for generating strategies for humans? Later Chesslabs will return to this intriguing topic.

Program automation: End this neglect

IN response to Computer Weekly's Call for Action I strongly endorse the proposal for a task force to retrieve something from the mess.

Clarion calls always carry a risk that the good citizens may rush out of doors and, each mounted on his own mettlesome hobby-horse, gallop off in every direction except where the trouble is.

The location of the present disaster area is too obvious for that, namely in the Land of Myopia commonly referred to as Whitehall. Shirley Williams' recent feat of producing a 54-page Green Paper on Education with no mention of the word "computer" is one small straw in an ill wind.

The UK has the traditions, the skills, the brains, and the know-how to recapture world leads in computing and software. These knowledge-intensive sectors of our culture and economy are precisely suited for concentrated treatment by a country which is small and poor, yet still enterprising in outlook.

Thus far, I am sure, we are all agreed. The question is: are these potential assets frequently/sometimes/never sent to hell in a basket by the caprice and obtuseness of bureaucrats?

A. M. Cox of Ferranti was right to call attention (CW, August 25) to the fact that UK firms are still to be found in the front wave of new developments. It should also be noted that excellent things have recently been done by individual government agencies, such as NRDC and the National Enterprise Board's consortium, Inscat.

But it is wrong to conclude that the "concealed in the UK, made elsewhere" pattern is not a real problem. My experience over years of professional activity in the potentially active field of machine intelligence is that it is precisely at certain sensitive transition points along the line from conception to production that official obscurantism wreaks the deadly havoc.

Taking time out from his normal Priveterview column, Professor DONALD MICHIE takes up the recent Computer Weekly call for action to create national policies on the development and impact of Information technology. Here he argues for the establishment of vigorous national R&D effort.

I received a painful reminder the other day at breakfast when my eye fell on a full-page colour advertisement from General Motors headed:

A COMPUTER THAT CAN SEE GETS ITS FIRST REAL JOB

Four years ago I had responsibility for a fine team of gifted young computer scientists who had just achieved goals in robotics widely judged impossible in relation to constraints of time and resources.

General Motors, hearing of this, borrowed the film record which we made of the Edinburgh versatile assembly system. At about the same time our government sponsor suddenly terminated all support, and the team had to be disbanded.

It is clear from the colour ad that General Motors over the intervening four years have faithfully followed our trail, transforming into cost-effective implementation an academic exploration of machines "teachability" as a programming short-cut. Unfortunately General Motors is not a British firm.

The aid government sponsors even managed to mis-identify the FREDDY project as an exercise in manufacturing technology instead of in computer science. It may therefore be of interest to spell out the place of such work, as I see it, in the technical scheme of things.

Machine intelligence is directly and inescapably involved in the automation of programming skills. It is of course only one of the critical areas from which progress in the automation of programming may be expected.

In the past, disciplines such as compiler design and program

semantics have justly claimed the lion's share. But the user of the future will not be satisfied to specify his solution in Cobol or Fortran and have only the machine-coding automated.

He will demand to be lazy and specify his problem only, plus hints at a solution — approach, with a few examples and a body of general facts about the problem-domain. Then he will expect Super-compiler to generate him a good solution in, say, Fortran.

As Super-compilers move to the centre of things, mainstream machine intelligence techniques will have an increasing role to play in their design. I am currently working on ALI, a Super-compiler for chess. In end-game trials a two-month programming task was done in two days and a task widely thought to be "unprogrammable" was done in six weeks.

As with manufacturing/ computing confusion instanced earlier, we again encounter one of the more persistent delusions which buzz inside the bonnets of government administrators of scientific research.

These persons need to discover whether as the taxpayer's agents they should love, hate, or merely giggle at this or that experimental programming study. Procedure follows the rule: (1) ascertain the program's test-domain; (2) adopt attitude accordingly.

To caricature the rule, if it is a picture-processing program the test picture may be of members of the Royal Family (love), or of notorious dictators (hate), or of the characters in Winnie the Pooh (giggles). If the program drives a robot, then it is industrial automation (love, but possibly someone else's — try Department of Industry), and if it plays chess it is a frivolous evasion (giggles).

The logical end is that nothing at all gets classified as computer science, unless the subject domain is so inconspicuous as to escape detection, thus letting computation theory in under the wire.

The scientist, on the other hand, knows that the experimental task chosen is orthogonal to the principles to be elucidated. A robot might learn recognition rules from sample TV views of engineering parts, and a chess program might learn strategies

from sample positions. If they use the same fundamental mechanism, then they constitute one and the same contribution to the automation of programming.

Imagine that early R&D in support of telecommunications had been monitored by assessors according to the content of conversations tapped from the telephone wires. "We can support this, I distinctly heard some very nice words," "but... but very badly spoken!" thought... and so on.

Merrill's telecommunications research was judged in the US important enough to merit the same and protected environment of properly regulated research institutes, and 33 Laboratories among others was born.

Now in the new wave of computing technology, major institutes for advanced computing have been established in the US and some existing institutes, such as Bell Labs themselves, have become pre-eminent in the new disciplines.

In the UK what is the score? The score for the entire country is precisely zero. For a few years SRC's Atlas Computer Laboratory seemed to tremble on the brink of developing in this much needed direction. But readers of Professor David Barron's recent obituary of that laboratory (IUCN Newsletter vol 3, no 1) will know that opposition to a freestanding national research effort in computing is deeply entrenched.

There seem to be at least British software and system houses to come together to form a joint overseas marketing spearhead. There are enough experienced research men scattered around the UK who are willing to form an R&E spearhead which could carry out ahead of all comers — excepting the Americans and Japanese, in the critical area of software automation and associated skills.

Since the total cost of programming to the nation is approaching the amazing figure of £1,000 million a year, the effort is worth at least a look.

When we add the possibility that one day certain kinds of programming might be necessary to be contracted out by industry to the UK industry, then the only software people able to handle the given levels of task-complexity, then I submit that a national institute for advanced computation is very much more than a look.

It should be seriously discussed by any task force which Computer Weekly's initiative may bring into existence.

SEL updates operating system

A MAJOR update of Systems Engineering Laboratories' operating system for its SEL 32 microcomputer series has been announced in the UK. The system now includes a time sharing capability, and is accompanied by a Basic compiler and a database management system.

The time sharing capability, said UK managing director John Wright, would make the SEL 32 more attractive to the commercial market. Previously, the company had concentrated on scientific and technical users, though the system already has a Cobol compiler.

The Maxximum database management system handles hierarchically organised databases, and has an added capability for managing partially inverted files. This allows the user to access records by the value of certain key fields.

The database software also supports a pointer item, allowing data to be referenced by absolute core memory location. This simplifies, in particular, the storage of data from real time monitoring and sampling hardware.

In the UK what is the score? The score for the entire country is precisely zero. For a few years SRC's Atlas Computer Laboratory seemed to tremble on the brink of developing in this much needed direction. But readers of Professor David Barron's recent obituary of that laboratory (IUCN Newsletter vol 3, no 1) will know that opposition to a freestanding national research effort in computing is deeply entrenched.

GEC system to produce Braille texts

A GEC 4070 is to be used to help produce Braille texts from English originals. The system, to be installed by the Royal National Institute for the Blind, at its new London printing works next year (CW, May 12) will drive a Braille line printer if a single copy of a document is wanted, or produce tape cassettes for controlling the embossing machines which produce metal plates used on printing presses for mass production.

English text will be input by 16 display terminals and edited online, so the system will be a considerable improvement on the present card based system which takes up to a year to produce a novel in Braille.

Racal show attracts over 6,000 visitors

THE annual Racalex exhibition of products from the whole Racal group attracted 3,500 visitors to the Royal Lancaster Hotel, London, last week, and proved the most successful yet, with 700 foreign visitors from 98 different countries attending.

In addition, 2,500 of the company's 6,000 UK employees visited the show.

Two products which attracted most attention were the Racal-Mingo System 180 Network Management System, and the Racal-Teccom CAFF, computer-aided fault finding system.

Autumn lectures

A SERIES of public lectures on machine intelligence is to be presented by members of Edinburgh University's Machine Intelligence Research Unit this autumn. The unit is headed by Professor Donald Michie, a regular contributor to Computer Weekly, who will himself be presenting five of the eight lectures.

The lectures will start at 5.15 pm in the Faculty Room North, Home Tower, George Square, Edinburgh. They are free, and no advance tickets are needed. The dates and topics are as follows:

OCTOBER 17: Perspectives of knowledge engineering — a review of systems being developed around the world for condensing and re-writing long established scientific laws and useful arte.

OCTOBER 24: The Stanford Mycin system for clinical pathology.

OCTOBER 31: The Stanford Dendral system for organic chemistry.

NOVEMBER 7: A fast retrieval system for the Edinburgh Western General Hospital.

NOVEMBER 14: The state of play in computer chess.

NOVEMBER 21: Machine-aided synthesis of rules of thumb.

NOVEMBER 28: Proving chess strategies correct.

DECEMBER 5: Social aspects of machine intelligence.

Merrick elected CSA president

PETER MERRICK, managing director of the bureau Lowndes-John, was voted president of the Computing Services Association last week.

In his acceptance speech, Merrick said the growth of minicomputer and microprocessor systems meant that there was an even greater need for the professional expertise of service companies.

He also believed it essential that the CSA continued to recruit new members so that more funds would be available to increase the effectiveness of its activities.

Merrick's vice-president is John Ockenden, of Scicon. The secretary is Basil Cousins, of Computel, and the treasurer Dr Douglas Eyles, of BOC's bureau subsidiary Datasolve.

Barney Gibbena, of Computer Analysts and Programmers, has replaced Merrick as the CSA's representative at the European Computing Services Association.

Peter Merrick

Super-Zappers—the latest in computer crime

"COMPUTERS have provided crooks with a new way of stealing as opposed to the previous manual methods, and the timescale in some cases is milliseconds," according to Donn Parker, a senior consultant for Stanford Research Institute International.

"There is also a danger of organised crime and foreign powers moving into the computer crime field," he added.

This new world has been created by the introduction of computing into our personal and business lives, and it is a world inhabited by Super-Zappers, Trojan Horses and Salami techniques.

To many the jargon means nothing — just an "in" way to describe an event — but, says Parker, "I guess when a field has its own buzz-words, it has arrived."

Last week he chaired a two-day conference on information security, organised by Online at the Regent Centre Hotel, London.

He has lectured to FBI agents on the problems encountered by investigators in computer crime, and has been in the "computer abuse" field for about two decades.

An infamous example of computer-related crime is that of the Equity Funding Insurance fraud, in which 54,000 fake insurance policies were produced and maintained by skilful manipulation of a computer. This resulted in an estimated \$2 billion fraud which was dramatised on television as "The Billion Dollar Bubble".

"One specific area important in terms of computer crime is EFTS, electronic funds transfer systems," said Parker. "The

problem is that, with the state-of-the-art in computing, we cannot have any real safeguard. It will be at least eight years before a commercially available computer that has adequate safeguards is available."

"Super-Zapping is the method of by-passing system safeguards and procedures, and is similar to previous manual methods called 'zapping'. Trojan Horse is a secret code embedded in the original program. Salami techniques involve apparently harmless acts such as rounding down of amounts, but due to the typical volume of data can be very lucrative.

automated, the danger increases. EFTS is a danger area."

Research by Parker on a selection of 362 computer crime cases has shown certain vulnerable areas. These include poor controls over manual I/O handling, failure of business ethics, poor control of computer programs, weak or absent physical access controls, and lack of operating system access controls and integrity.

"I can see no difference in the dangers between the US and UK," said Parker. "Programmers are one of the most dangerous types of people, and

This sporting life

OUR story about the system used by the Football League to compile fixture lists (Downtime, September 1) has evoked a response from a reader who has been involved with the system.

It appears that the system is used by the Football League to compile fixture lists (Downtime, September 1) has evoked a response from a reader who has been involved with the system.

The system consists of a validation program, two sorts and a printing program. The validation program checks for inconsistencies, omissions and duplications, and has options for checking that each team plays every other team in the division once at home and once away, and for printing out lists of teams not playing on a given range of dates.

The printing program produces fixture lists by club or by date, according to the preceding sort.

The system takes five minutes to run on an ICL 1800 running under George 3, and 10 minutes to print the output.

How to reduce your COM problems.

We introduced the first self-contained Computer Output Microfiche system. Today that system is compact, fully automatic and completely self-contained. It takes you from tape to microfiche in one easy push button step.

Furthermore, you can have the NCR Quantor COM system with or without a front end processor, depending on whether you want your computer or the system to format the tapes.

But perhaps you don't need an in-house system yet. Then an NCR COM Bureau will take care of everything for you.

After all, the same holds good for our COM services as our COM hardware. Expertise. Experience. All the back-up of a major multi-national business systems company.

In fact, no-one is better placed to see you get the most out of COM, whatever your needs. Even down to a comprehensive range of readers.

So if you're going over to COM, we see no problem.

Provided you come to us.

For Michael Craheen, NCR Limited, 206 Marylebone Road, London NW1 6LY. Telephone 01-723 7070.

Please tell me more about COM. I'm interested in:

COMPUTER WEEKLY

The following special supplements are due to
be published during

OCTOBER / NOVEMBER

**★ INTERNATIONAL EDITION —
SYSTEMS 77 PREVIEW
+ Bonus Circulation
October 13**

The biggest West German showcase devoted exclusively to computer
systems and peripherals, Systems 77 takes place in Munich from
October 17-21.

Once again, Computer Weekly is taking a stand at the show to offer
advertisers an unrivalled means of reaching the large number of
high-calibre visitors to the show. During the course of the exhibition,
6,000 copies of the October 13 Computer Weekly edition including a
comprehensive preview of the exhibits on offer, and a series of articles on
computing in West Germany, will be distributed to visitors.

**NOVEMBER 3
COMPEC PREVIEW
+ Bonus Preview**

Following the resounding success of Compec at the Wembley
Exhibition Centre last November, the show returns to the same venue
next month with an even bigger line-up of companies eager to promote
their wares. The show runs from November 8-11, and will be the
subject of a supplement in Computer Weekly on November 3, where
Computer Weekly as sponsors and owners of the show will be
exhibiting and 5,000 additional copies of the issue will be distributed.
Topics to be covered include how microprocessors assist the
peripheral manufacturer, how users are being used to change
intelligent terminals into distributed processing systems, whether goes
the mini-computer? threat from micro? are mini taking over from
main-frames? marketing low cost commercial microprocessor systems:
limitations of microprocessors; why U.S. exhibitors are more exciting
than UK shows.

PEOPLE

Seicon board seat for O'Malley

APPOINTED to the main board of Seicon Computer Services, a subsidiary of British Petroleum, is Jack O'Malley who has been responsible for marketing at the Seicon bureau since 1976. He joined the company in 1969 as an applications consultant in the turnkey systems division.

Rising through the hierarchy, O'Malley became operations manager and as such was involved in the planning of Seicon's computer installation, established at Milton Keynes. He was appointed general manager, sales, in 1975.

James Robson, formerly European sales manager of Rascal Zonal, has been appointed vice president of the European marketing division of the Wabash Tape Corp. of Huntley, Illinois. He will be based in London.

Frank Noone has been appointed sales engineer by Terminal Display Systems of Blackburn. He has been with the company for nearly two years handling internal training, customer liaison, etc.

Robert Corrao has been appointed CATV marketing manager for Jervoid Electronics, a subsidiary of General Instrument Corp, US. Prior to joining Jervoid, he was manager marketing planning for the community television systems division of RCA Corp.

COURSES

SIX short non-residential courses are to be run by the NCC in the North-East during October and November. They are: database concepts, October 27-28; online concepts, October 27-28; Fileval, November 8-9; project planning and control, November 15-16; computer concepts for managers, November 17-18; and structured programming, November 28-30. Further details from M. Pass, tel: 061 228 0331.

TWO courses under the general heading Accounting for the Human Factor are being run by BIS Applied Systems. Their titles are Effective Presentation and Reporting Skills, and Interpersonal Skills-Transactional Analysis. The courses are residential and the first will take place on October 24-28 and the second on November 28-December 2. For further information contact Stephen Davies, 70-80 Blackfriars Road, London SE1 8HT, tel: 01-824 9511.

THE Department of Electrical Engineering at the University of Salford is holding two one-session courses on microprocessors and minicomputers and their applications. The first covers fundamental aspects and runs on Mondays from October 10-December 12. The second course is a follow-up dealing with more advanced topics and applications and also runs on Mondays, from January 8 to March 13. Each session lasts one full day. Each course can be taken alone. Further details from The Administrative Assistant (Short Courses), Room 2, University of Salford, Salford M6 4WT, tel: 081-736 5843, ext 446.

SNA NETWORKS are covered by several courses which Hutchinson-Scoggins offers. Titles of some courses are Introduction to SNA, SNA Protocols and Logic Workshop, and SNA for Network Operations Controllers. For details of all courses phone 01-499 4501.

EVERY IBM USER MUST KNOW ABOUT SNA

A MESSAGE TO MANAGEMENT

If you are involved in developing an IBM teleprocessing system you can't ignore SNA. You may already be committed to SNA without realising it.

We announce a one day seminar entitled "INTRODUCTION TO SNA"

Designed to give a quick impartial introduction to SNA, the day will cover conceptual overview, significant features and organisational requirements for successful implementation.

Lecturer: MR. BRIAN BURCH who designed and implemented the world's first OS/VS1 based user SNA network.

Date: 17th NOVEMBER 1977

Venue: MAYFAIR HOTEL LONDON W1

Cost: £65.00 + £5.20 VAT (Including luncheon)

Phone Brian Burch for booking forms and further details

IF YOU ARE AN IBM USER YOU ARE INVOLVED WITH SNA. THIS IS SOMETHING YOU SIMPLY CAN'T IGNORE.

hutchinson-scoggins
technical support

10 Dover Street London W1X 3PH 01-499 4501

OP SPOT

A forum for your ideas

HELLO THERE. My name is Bernard Allen and this week I am taking over Computer Weekly's operations coverage, particularly the weekly Op Spot column.

Let me tell you something about myself. I started with the Magnet Computer Bureau, a member of the CEC-Elliott group, where on Elliott 503 system was in operation. It was a small, lively environment, with two operators per shift, and I was soon introduced to the various aspects of computer operations.

Then I moved to Barclays Bank and became a member of a large shift concerned with the operation of two IBM 370/168s, running under OS MVT with Hsp and supporting a large number of applications. At Barclays I attended a number of DP courses to broaden my technical knowledge.

My next installation was that of the London Electricity Board at the Elephant and Castle. I gained further practical experience by operating n 370/158 using OS/VS1.

That is the background that brings me to CW and Op Spot. Op Spot is concerned with computer operations — In all its aspects. This is a broad subject and each week I intend to bring a specific topic into focus. Some areas I intend to cover include:

Training: The amount and level of training available for operations staff varies greatly from one installation to another. In my experience operations, particularly trainees, often feel neglected in this matter.

Shift Work: All installations, regardless of size and the number of staff employed, work irregular hours to some degree. Shift systems are often the cause of serious comment in relation to such things as health and are sometimes the source of humorous tales — particularly the night shift.

Shift Allowance: Does the rate of allowance received by operations staff fully compensate for the inconvenience incurred by working unsociable hours?

Career Progression: In some firms operators are encouraged to move on to technical support or programming. Should operations expertise be regarded as an end in itself, or should it be treated as a prelude to other computing disciplines? In this respect I am interested in hearing from operators who have moved from operating and would like to know of any difficulties they might have encountered.

Communication. There is

often a lack of communication between management and operators, and a lack of co-operation between operators and programmers. It might be interesting to consider these problems and how they might be resolved.

I would hope to broaden the forum of Op Spot, using it as a forum where Computer Weekly readers can express their ideas and views. All communication is welcome, whether critical, humorous or topical. I look forward to hearing from you.

● If you would like to contribute to Op Spot, contact Bernard Allen, at Computer Weekly, Dorset House, Stamford St, London SE1 9LU.

Three bodies unite on privacy policy

FIRST of a series of joint statements on computers and privacy has been sent to the government's Data Protection Committee, which is drawing up proposals for possible legislation to protect personal data, by the British Computer Society, the Computing Services Association and the Data Processing Management Association.

The three bodies represent about 30,000 members of the computer industry.

The statement does not differ from views expressed in the three organisations' individual submissions to the Data Protection Committee last year. But, as Gerry Fisher, BCS retiring president, put it, "We felt that a joint statement by three major bodies representing people and companies in the computer industry would add weight to our separate submissions."

Alan Benjamin, director-general of the CSA, added, "It is important for the Data Protection Committee to find out if there are any areas the industry feels strongly about."

The first area considered by the three organisations is licensing. The statement, which formed the basis of Benjamin's presentation to the international conference on trans-border data flow, organised by the Organisation for Economic Co-operation and Development last month (CW, September 29), says the proposed Data Protection Authority should licence the use of information and also issue certificates of security to those responsible for operating the computer.

The statement says that work involving the use of personal data risks breach of privacy, so the public should expect that such work is done under controlled conditions. And it points out that the onus should not fall totally on the computer operations department because, although the department must provide security appropriate to the level of sensitivity of the data, in many cases it will not know what the data is used for.

The three organisations call for the formation of a statutory licensing authority which should be independent of government and supported by fees.

Fisher said a £10 fee for each application would cover costs, as estimates have put the number of applications at between 50,000 and 100,000, although it could be twice as many.

Other topics to be studied by the three bodies are the response time to a citizen's request for access in information about himself stored in computer systems; the role of reasonableness in drawing up security standards; the costs of security; and the harmonisation of legislation in different countries.

One organisation absent from these joint discussions is the National Computing Centre. It was invited to join in, but, as Eric Howe, NCC deputy director, put it, "We didn't think it really appropriate for us to go in. It would have meant seeking our members' views again and we did that pretty thoroughly first time round so we decided to let our members' views stand."

Doubts on IBM sales boom

From Front Page

We will consider all the alternatives and the first thing we will look at is the 3033.

The bank is likely to be one of IBM's most important SNA customers.

Overseas Containers, running a 158 under DOS/VS and planning to switch to MVS, needs a second processor, but there is no question of switching the order for another 158 to one of the new IBM machines — or to an Andahl or Iel system.

"The 158 has some time to run on the lease, and the second one, which we are getting in April, will be on rental," said DP manager Brian Barber.

"It will take about 18 months to get the system running in multiprocessor configuration, and we will start thinking about 3033 in two years."

"The Andahl and Iel offerings are excellent boxes, and we wish IBM made them. If we had the leisure to check out their systems and to sort out all the possible problems ourselves, we would consider them, but we are heavily dependent on IBM software and support. IBM is anyway becoming more competitive, and we don't want the problems of multiple vendors."

At Dunlop in Birmingham, the 307/155 is about to be replaced by a 158, which will run under OS/VS1 where the 155 runs under MFT.

"We are not committed to the 155 and we do use plug-compatible peripherals," said a spokesman. "Our approach is to start drives and then try a plug-compatible alternative. But as far as we can feel that they are yet adequately proven."

At Esco, operations manager Nathan Higginbotham says that the company is always looking at alternatives.

"We have only had our 158 running MVS for a year, so we are not ready to replace it. But Esco does have an Andahl 470 in the States, so we are not tied to IBM," he said.

Teunco is a subsidiary of a Norwegian bureau, and took over the lease on a 155 formerly used by the International Publishing Corp. IPC. At present running MVT with modified HASP, the bureau has no immediate plans for a change.

The Stock Exchange is fully occupied getting Tullmann up and running on its 158, and is likely to stick with IBM for at least another couple of years.

Thomson Holidays, running a big holiday booking system on a 158, believes the fact that it is using a special real-time system based on assembler-coded software from KLM produces it switching to other hardware.

The London Electricity Board, running a 158 under OS/VS1, is quite satisfied with the system. "We are determined to make the 158 a success and so is IBM," said a spokesman.

Freemans, the mail order organisation, is in the same situation, planning to continue with its 158 at least until 1980.

Sun Alliance, the big insurance company, has two 155s in Horsham, and another in Birmingham.

"We are always looking at cost-effective alternatives, but cost is not always the overriding factor," said a spokesman. "We have looked at the new systems, and Iel looks interesting, but we are not keen to be first in the field with both hardware and software."

Datastream, the indispensable tool for the financial community, is running a very full 158 under MFT.

"We are looking to expand," said a spokesman, "but we have not yet decided whether to move to a larger machine or to put in a dual system, nor have we decided on a future operating system. We would want to see the Andahl 470 prove itself before making a commitment."

ROSCOE

The Librarian/online

The LIBRARIAN, ADR's Source Program Management System, is one of the computer industry's most widely installed software products with over 3,000 installations. It has been the recipient of several awards including "Software of the Year" and "Software of the Future" by the Software Users Club.

To service the needs of S/360 and S/370 installations operating in real-time environments, several optional on-line facilities are available with The LIBRARIAN.

For CICS and Other Teleprocessing Environments

The LIBRARIAN/Online (LIB/OL) is a low overhead, on-line source maintenance system designed for use with the LIBRARIAN at OS/VS1 installations operating with CICS or other teleprocessing monitors. All of The LIBRARIAN's updating functions are available to programmers working in a batch environment, with LIB/OL, be invoked from teleprocessing monitor terminals.

The LIBRARIAN/Online Extended, an advanced version of LIB/OL, is fully compatible with CICS and other teleprocessing environments.

The LIBRARIAN/TSO interface, a bridge between the TSO and LIB/OL, is also available.

Online Program Development — the "Quiet Revolution", away from noisy card punches and printers onto silent VDU's — is probably one of the most dramatic changes in today's programming environment. Our current users report many very real benefits — much increased programmer productivity, paper savings, reduced project duration... And with minimal impact on the computer resources and operating environment.

If you'd like to know more about our Online Programming Products, or any other products in our range — just phone or drop us a line at the address below.

Computer Program Products Ltd, CAP House, 14-16 Great James Street, London WC1N 3DY. Telephone: 01-242 0081.

LETTERS

Why not join the DPMA instead?

FOR the Data Processing Management Association to reply to the letter of Mr D. K. Allan, secretary of the Kingston branch of the British Computer Society, would perhaps be presumptuous. After all, the letter was no doubt addressed to the BCS executives who, it is hoped, will make a considered reply in due course.

Meanwhile, Dave Allan asks what can individuals do about the impending imposition of the "Immoral and unprofessional" application fee and higher subscription. The DPMA has a practical suggestion. Potential (and current) members of the BCS should consider joining the alternative computing association, the DPMA.

Unlike the BCS, whose membership has been "atragating and is now declining, the DPMA is flourishing. Last month alone, application inquiries were equal

to 10% of present membership.

In no way is the association interested in the traditional internal bickering of the BCS. What the DPMA is involved in is reflecting and promoting the views of its members on a practical basis, such as a stimulating survey — in conjunction with Langton Information Systems — on the recent Carter report on the UK Post Office. The industry award scheme introduced last year is already regarded as the major DP management award.

Other current activities include the sponsoring of an industry standards publication for

first-time users, the mounting of practical seminars, workshops, conferences and branch meetings.

Incidentally, the DPMA's application fee has remained at £1 since inauguration, ten or so years ago. This sum amply covers all processing costs and the association has no intention of increasing the amount.

If you are a responsible manager, supervisor, practitioner or computer professional, the DPMA would like to hear from you.

NEVILLE TAYLOR,
Chairman, DPMA
Maidenhead, Berks.

The Editor welcomes letters commenting on subjects published in Computer Weekly, or on original topics. All letters must be accompanied by the writer's name and address, not necessarily for publication.

Frankenstein moral: Be kind to the beast

I FEEL very sympathetic with the views of Robert T. Street (Letter, September 15) commenting on my article on machine translation. He speaks as a former translator, a practitioner of a very skilled craft, and he feels that no machine can replace him. What he fails to realise is that in this age machines must replace him, because human translators cannot possibly cope with the volume of translation required in the world today.

In the European Community alone the problem is so serious that a congress was held in Luxembourg in May with the theme, "Overcoming the language barrier." There are seven official languages in the Community and many documents are required in all of

them. Many are highly technical. There is such a shortage of translators that many have to translate documents dealing with branches of technology in which they have had no training. They have to rely heavily on computerised dictionaries and thesauri. Many of the documents presented for translation are ambiguous.

A number of translators spoke in the discussions at the congress and were in favour of machine translation. My own paper on Slant was well received and several translators congratulated me on it personally.

In the developing countries there is the very serious problem of the shortage of technical books in native languages. If these countries do not get books through machine translation they will not get them at all.

There is also an urgent need for machine translation in other areas.

This is the situation, and whether Mr Street likes it or not, machine translation research will continue. Mr Street is doubtful, however, whether any such research can succeed. He stresses two points particularly: the difficulties in making and updating dictionaries and the difficulties in the actual translation process of dealing with nuances of meaning.

These difficulties undoubtedly exist, but he must be aware that some texts are vastly easier to translate than others. Personally I divide texts into two broad groups: "exact" texts and "non-exact" texts. "Exact" texts include business correspondence and texts in many branches of science and technology where every term must and can be defined exactly. "Non-exact" texts include texts in such sciences as psychology, where many nuances of meaning occur.

I am only concerned with "exact" texts at present, and in particular with business correspondence. The dictionary is small and changes rarely, and the sentence structure is simple. There are problems, but I feel confident that they will be solved. We can later move to more complex "exact" texts. Dictionaries are larger and need a good deal of updating. Many, however, are already in existence in the EEC in Brussels and have been especially designed and are particularly suitable for computer handling. I feel confident that the necessary techniques are understood for translating almost all "exact" texts.

It is when we come to the "non-exact" texts with their nuances of meaning that greater difficulties will be encountered.

WALTER GOSWAMI
Bexleyheath, Kent

In Mr Street's letter, Frankenstein's monster is the computer. This being so, the moral is to be kind to your computer. Start by feeding it with easy material for translation. Bring a large, friendly, studious, highly intelligent and anxious to be loved child into the world to be fed to read any of the world's books that they want to read in their own language.

I am a lover of reading, Mr Street evidently is. I too have read "Frankenstein," but I do not see the monster with the electric blue hair and the lightning bolts. I sympathise with the unfortunate monster. When he was first created he was gentle, friendly, studious, highly intelligent and anxious to be loved. But because of his unusual appearance, he was ruthlessly hunted like a wild animal by the local people and finally became brutalised.

In Mr Street's letter, Frankenstein's monster is the computer. This being so, the moral is to be kind to your computer. Start by feeding it with easy material for translation. Bring a large, friendly, studious, highly intelligent and anxious to be loved child into the world to be fed to read any of the world's books that they want to read in their own language.

So a series of seminars, devoted to technical and applications aspects of microcomputers, at Oxford University, is particularly timely. The first meeting is scheduled for October 13, at 4.30 pm, and will feature a review of developments in microprocessor technology, by Howard Kornstein, of Intel.

Further meetings, held once a week, on Thursdays, will deal with a variety of hardware and systems software topics, and applications ranging from process control to image processing. Speakers will include Tony Duncan, of Oxford; Professor H. J. H. van den Hul, of Bristol University, and representatives of CAP Microsist and University College London's Clip array processor team (CWL, February 24).

Venue for the seminars is the nuclear physics laboratory, Keble Road, Oxford. Admission is free.

Gothenburg fair

ABOUT 100 manufacturers and service companies in the microcomputer field are expected to exhibit at the Mikrodat 77 trade fair and conference in Gothenburg from November 15 to 19.

A different conference theme will be taken each day, covering microcomputer technology and the community, programming and maintenance architecture, and quality control.

Further information on the fair-day fair can be obtained from the Swedish Trade Fair Foundation, PO Box 5223, S-402 23 Gothenburg, Sweden.

Expensive truisms

"CORRECTNESS is the main foundation on which reliable software can be built" (User View, September 15).

This profound thought, which costs £85, will amaze DP practitioners the world over. No doubt Infoleach International Ltd will be inundated with orders for this revolutionary document.

Another astute comment in the report, according to User View, is that the most important factor in software is that it should perform the tasks required of it. Is there no end to the brilliance and originality of the State of the Art? Well, now that Infoleach has revealed the truth about software, there is

going to be a major re-evaluation of the whole foundation on which computer technology is based.

A 2,000-page report is available from: European Publications, which makes another valuable contribution to the computer world. It is a practical guide to the microcomputer field, covering the latest developments in hardware, software, and systems architecture. It is a must for anyone involved in the microcomputer field.

Infoleach International Ltd, PO Box 100, London W1A 0AB. Tel: 01-253 8888. Telex: 940000. Fax: 01-253 8889.

GIM's single bit

A SINGLE-BIT microprocessor for applications requiring an inexpensive sequence timer and controller has been introduced by General Instrument Microelectronics. Called a Sequential Boolean Analyser (SBA), the device is programmable in Boolean functions to facilitate the direct replacement of electro-mechanical circuitry in industrial applications.

Housed in a 40-pin package, the SBA comprises a logic unit, an associated 18-level stack to facilitate the execution of multi-term functions, a 1024 by 8 bit word ROM program memory and a 120 bit RAM which is used to store as many logic states.

Thirty of the 40 pins are available as latched input/output, and can be mask programmed exclusively for either function. If the interface requirement is greater than this, inputs and outputs can be multiplexed together on common pins.

A range of hardware and software development aids have also been produced for the device, including an evaluation chip where the ROM has been replaced by an external PROM for program development work.

Oxford seminars

MICROPROCESSORS, already quietly carving a niche for themselves among computer users, have been brought even more into the arena of public debate by Professor E. W. Dijkstra's attack, and Jann Barron's defence of the rise of the micro (CW, August 18).

So a series of seminars, devoted to technical and applications aspects of microcomputers, at Oxford University, is particularly timely. The first meeting is scheduled for October 13, at 4.30 pm, and will feature a review of developments in microprocessor technology, by Howard Kornstein, of Intel.

Further meetings, held once a week, on Thursdays, will deal with a variety of hardware and systems software topics, and applications ranging from process control to image processing. Speakers will include Tony Duncan, of Oxford; Professor H. J. H. van den Hul, of Bristol University, and representatives of CAP Microsist and University College London's Clip array processor team (CWL, February 24).

'The ill-equipped decision-makers'

THE micro in its many guises has already achieved such explosive growth that decisions on its implementation in systems are being taken by managers and engineers 'ill-equipped by experience.'

This, according to Richard Peattie, engineering director of the Electrical Research Association, has already been confirmed by early work carried out for the recently announced project, 'The Engineering of Microprocessor Systems'.

"While improving technology is making microprocessors easier to use," Peattie said, "there are now more people with less skills involved in system design and implementation, so that even better tools are required."

He pointed out that as microprocessors are introducing new technology and problems into many non-electronic organisations, software had now

become the dominant factor.

The project involves the association in a detailed investigation into microprocessor system economics, hardware development aids and support software to be carried out in five interlinked phases. A principal objective will be to help systems engineers appreciate the technical, financial and managerial aspects of developing a microprocessor-based system.

The early work on the project has highlighted several trends in the industry that are not altogether beneficial.

For example, although support facilities for microprocessors are improving steadily, and the devices are achieving some comparison with minicomputers, the single chip microcomputer has, temporarily, reversed this trend. The physical constraints of the device currently make them harder to program

and less general in application.

Again, although there is now a wide range of development hardware available, there has been little corresponding activity in software. High level languages are becoming available, but they put a higher demand on the development system, especially in terms of memory.

In addition, the project has shown that much of the high level software now available contains bugs that can play havoc with a new product development schedule.

These initial views on the microprocessor have stemmed primarily from the 40 companies which have already agreed to participate in the project. The majority are end-user companies, many of which already have practical experience of implementing micro-based systems.

Chris Nelson, head of ERA's Microprocessor Development Group, surveys some of the wide range of equipment available from which systems engineers must choose.

8-bit octal register

FIRST in a range of 20-pin octal interface devices introduced by Memory Devices will provide high speed interface capabilities for bus organised digital systems.

Manufactured in the States by Monolithic Memories, the first device is an 8-bit octal register,

type SN74S374. It features 3-state outputs designed to drive the high capacitance and low impedance required by long buses.

Future devices will include Schottky and low power Schottky latches, registers, buffers and transceivers.

Your chance to assess distributed processing with the SyFA system at NCC, Manchester. And go computer racing!

The SyFA system from ComputerAutomation is the world's most advanced distributed processing system, developed specifically as a management tool to supplement the mainframe computer. SyFA solves the problem of overload and resilience at a fraction of the cost of buying another, bigger mainframe. And it gives users immediate access, whilst remaining firmly under central control.

The SyFA system is being demonstrated at the NCC, Manchester throughout the day between 9.00 and 18.00 hours on Tuesday 11 October, Wednesday 12 October and Thursday 13 October.

Added Attraction. Between 16.00 and 18.00 hours each day there will also be the chance to win a bottle of champagne in our SyFA Le Mans competition. Come along and try

your hand at computerised racing!

If you would like an invitation to see what distributed processing is really about, just call John Goodman at ComputerAutomation on Rickmansworth (09237) 71211.

We look forward to seeing you.

...the British Computer Society.
...his presidential year

Bridging the gap in the BCS

Paul Samet
...it is wrong to split the computer profession into academic and commercial divisions.

THE academic versus the commercial: that perennial BCS discussion will once again raise its head this year, as Professor Paul Samet takes over the presidency.

On the face of it, there could be no bigger contrast between Gerry Fisher, the retiring BCS president, and Professor Samet. Fisher, as head of management services for Associated British Foods, is deeply immersed in the commercial world, and his voice is always being heard at meetings and conferences asking the question, "But what

does it mean to the typical commercial DP installation?"

Professor Samet, on the other hand, has lived most of his working life in an academic environment, from his initial training as a mathematician to his current position as professor of computer science at University College London and director of its computer services.

This contrast is, however, superficial one.

In their current jobs, as heads of large computer service departments, both men are faced with similar types of day-to-day computer management

problems, although in different environments.

And far from representing a schism in the BCS, it is a sign of health that the BCS can attract leading figures from different walks of DP life.

In fact, Professor Samet hopes to show during his year that there is no dichotomy of interest between the so-called academic and commercial worlds.

"For a start, it is wrong to split the computer profession into academic and commercial divisions," he comments.

"If a distinction is to be made, it is between those involved with computing techniques and those involved with applying those techniques."

"I would like to show that each side can gain from the other new perspectives, new dimensions to their own work."

The computing technician, in Professor Samet's view, is primarily concerned with an understanding of "systems" as opposed to particular applications, and with an awareness of the theoretical concepts that underpin the application.

This sense of the general rather than the specific; of the similarities rather than the differences underlying computer applications; of the long term systems requirements rather than the short term expediencies of daily DP life; these are the qualities that Professor Samet believes the technician can offer the DP applications person.

Most importantly, the technician should develop the technology that will enable applications problems to be solved more simply and effectively.

On the other hand, the applications person can give the technician a "sense of scale and of real life experience" and push a range of interesting and practical problems to be solved, with an awareness that a reasonable solution today is often preferable to a perfect solution next year; that a general approach is only meaningful if it can be translated into a workable specific solution.

Professor Samet himself is in a good position to see the mutually beneficial nature of a bringing together of the two sides of the DP community, as he is responsible for running a large computer service as well as having a firm grounding in computing techniques.

During our interview, he suddenly leapt to the blackboard to explain how a mathematical understanding of the nature of multiplication could improve the speed of processors.

His enthusiasm was not just for the mathematical theory, but the fact that the result could be put to practical use in processor design. "And just think of the commercial impact if we could make a significant advance in understanding how to sort n items more quickly," he added, with a glint in his eye.

Like many other prominent figures in today's computer world, Professor Samet never started out wanting to become a computer professional.

Mathematics was his first love, and his first encounter with computers in 1951 did not

entice him.

While studying maths at Cambridge, he went along with a friend to a lecture by Professor Maurice Wilkes, whose pioneering work on EDSAC at Cambridge was well underway.

"I did not understand a word Wilkes said," Professor Samet now admits.

His next encounter with computers was when he joined the Royal Radar Establishment at Malvern, as a mathematician. But gradually he became enmeshed with the computer, a programming adviser on the Deuce system of the Royal Aircraft Establishment's Farnborough.

It was at this stage he realised that the most important part of the computing technician's job is to help others to use the machine more easily.

"Deuce was a beastly program in an assembler; it did not even allow the user to name things. In order to make it work properly, every bit had to become a personal friend," he recalls.

Although he found the work interesting, at this stage still had no intention of making computers his career.

But, at the end of his allocations had been made, the establishment of a number of computer centres, including at Newcastle, which was part of Durham University.

After considering taking another post in mathematics, he eventually plunged for the job as a lecturer in computing at Newcastle. It was now under the spell of a computer, and in 1961 he became director of the Southampton computer laboratory. Six years later he moved to University College London to set up the computer centre and became Professor of Computer Science in 1970.

"You know, it's funny," he says, "even just before the professorship, my mother was still asking me when I was going to get out of computer into 'real' academic career as a pure mathematician."

Mrs Samet should not worry for her son has made it to the top of his own distinguished career.

But his mother's question should give Professor Samet some food for thought, as he enters his presidential year of the BCS.

For she is not the only person to question whether computer is a profession in the same way as the same old status of an established profession, a doctor, lawyer, architect or accountant.

Although the BCS is now established part of the computer community, it has still to be established that it is a profession, a body which is self-governing and has a right to be recognised as such.

If Professor Samet goes the way to bridging the gap between the "academic" technician and the "commercial" applications person, he may not only make a significant advance in understanding how to sort n items more quickly," he added, with a glint in his eye.

Like many other prominent figures in today's computer world, Professor Samet never started out wanting to become a computer professional.

Mathematics was his first love, and his first encounter with computers in 1951 did not

THE AUTOMATED OFFICE / IBS PREVIEW

Changes in the office are occurring at an increasing frequency, giving rise to new concepts such as word processing, and the "automated office".

Forerunners of these and other eventual systems can be seen at the 1977 International Business Show to be held at the National Exhibition Centre, Birmingham, from October 11 to 20, and a preview is given in this supplement.

But despite the progress, doubts whether such systems will become an integral part of the office, or even whether they should be

allowed to, are still harboured by some.

The opening article, by Tom Stewart and Leela Damodaran, discusses the merits and disadvantages of the office of the future, and the impact it will have on those who work there. A possible design of the future workstation, an integral unit through which communications and work will be channelled, is also given.

One forerunner, in terms of electronic mail, could be the Comsys network currently used worldwide by its designers, Hewlett-Packard. John Conry, a systems analyst with the company, discusses this system.

The automated office workstation for the information assistant - unlikely ever to be built as one unit, but the components are available, or will be soon. Key: 1-Flat-bed document input systems for copying (both local and remote) and scanning to input to computer system. 2-Loud speaking telephone with programming functions. 3-Nearly vertical A4 VDU screen for access to information system, word processing system and central records. 4-Magnetic board for holding source documents. 5-Microfiche reader, also accessible to computer control. 6-Microfiche store. 7-Two floppy disc drives linked to local microprocessor and also to central large computer network. 8-Floppy disc store. 9-Personal belongings locker.

● Turn to Page 18

'Motorways' to the office of the future

By Tom Stewart and Leela Damodaran

THE office is essentially an information processing system in which decisions are made and information is transmitted, stored and retrieved.

The appeal of the automated office is an improved throughput of information and decisions comparable to the sizeable increases automation has brought to production. However, at present, office automation has been patchy and fragmented, rather like a poorly planned roadway system. In some areas the information flows along six-lane motorways whereas in other areas it crawls along dirt tracks.

One current "motorway" involves photocopying. It is easy to generate hundreds of crisp, clear photocopies (if the machine is properly adjusted) and distribute these in all manner of people. Receiving or making a photocopy of a document or report has become a substitute for reading it. In fact, it is the sheer volume of information which photocopying has exploded into the office.

Tom Stewart, a lecturer in Ergonomics at Loughborough University, has been involved in a number of research and consultancy projects in the man-computer area ranging from computer system evaluation and dialogue design to hardware evaluation and terminal design.

Leela Damodaran is a research fellow in the Department of Human Sciences at Loughborough. She has, since 1970, been involved in teaching and a number of research and consultancy projects at the university. Her principal research interests have included studies of man-computer interaction and its implications for work design.

Another "motorway" is the automatic production of standard forms, letters, invoices and bills which computer technology allows us to churn out in their thousands. However, someone somewhere has to read the letter or form and make a decision accordingly. Indeed many people are fully employed sorting out the queries and problems resulting from mistakes and errors which creep into such systems.

These "motorways" unfortunately feed into "dirt tracks." Although computer databases, providing complex retrieval and access facilities, may be commonplace, a large part of the

traditional office function involves the storage and retrieval of documents and other originals which may be more than simply their apparent information content. These pose quite different problems in order to store and retrieve them accurately and efficiently.

There are systems to automate filing cabinets using drawers which run on electric motors or, alternatively, an entire stock of physical documents may be microfilmed and stored on fiche or reels. However, neither of these is entirely successful nor do they replace the traditional filing cabinet which occupies every office we know. One "dirt track" at present concerns the creation of documents. The creative process of writing a letter or report, in our case at least, involves scribbling barely intelligible marks on a piece of paper which are then typed up and corrected and despatched in a readable form. It is possible to use a dictating machine but this is an unusual skill which not everybody has, and subsequent transcription is a very labour intensive.

Another "dirt track" involves making telephone calls. The introduction of STD both within the UK, and in Europe should have significantly speeded up the process. However, it still remains possible to take a long time actually to get into contact with the person you want. The local exchange may be busy or you may have to go through a number of secretaries to get to the right person. All in all, many phone calls turn out to be a lot of work rather than a simple straightforward communication exercise. This either involves the secretary in a lot of work producing the numbers for the boss or if you are dialling yourself it can be a very lengthy and frustrating procedure especially with long telephone numbers.

Two "motorways" at present, therefore, are the production of standard forms and photocopying and these "dirt tracks" are the creation of new, the storage

Flexible, Programmable Network Control

NETCOM is a customised network communications processor and solves the problems caused by incompatible terminal protocols to enable devices with differing speeds, character lengths and codes to communicate with each other.

NETCOM can handle a wide range of interfaces including CCITT V24 Telex and Current Loop as well as more complex interfaces normally associated with main frame computers.

NETCOM can easily be incorporated into existing networks and can undertake synchronous/asynchronous serial communications, time division multiplexing, line speed detection, data validation, error detection and recovery, code conversion, etc.

NETCOM is the unique solution to communication problems - write to us for a brochure to explain how easy flexible, programmable network communication can be for YOU.

Netcom

The Communications Network Controller

Systems Reliability Limited

Visit us on STAND NO. 14 at the BUSINESS EFFICIENCY SHOW at Birmingham, Oct. 11th to 14th.

Distributed data processing has never been easier. Or better.

The innovative Inforex System 7000 lets you do it your way.

The new Inforex System 7000 adapts to your way of doing business, rather than you adapting to it.

If your business is distributed, then the chances are you've already decided to distribute your

data processing as well, which means you're ready for System 7000: a family of stand-alone and clustered processors that's been years in the making. By a company that's been years in the business of making information easy to use.

In fact, all the fields we've been into — data entry, file management, processing, communications — are the summation of what distributed processing is all about. And that's why we can give you not only the best hardware available, but also the best software (the latest COBOL), and the best service (our Inforex Support Teams).

System 7000 can easily handle tasks like remote source data entry, file enquiry, retrieval, and maintenance. Simple calculations or complex processing and communications.

And it can handle all those tasks at the same time. Which is something most systems can't do. And as your needs grow, it will grow with you, easily, logically and orderly. Because no matter where you're located, we'll be there to help you. Before, during and after installation.

No one but Inforex could give you that kind of support. And no one but Inforex could have brought you the System 7000. In distributed processing it's the real thing.

For more information, send the coupon to Inforex Limited, Inforex House, Headstone Road, Harrow HA1 1PL, Middlesex or telephone 01-883 8311. In the Manchester area telephone 061-707 1123.

THE AUTOMATED OFFICE/IBS PREVIEW

Robin Webster presents a preview of the 1977 International Business Show, which opens next week at the National Exhibition Centre in Birmingham.

The centre for 'wise business buying'

One of the attractions at the IBS will be ICL's Computer City, a walk-around exhibition, which will feature precincts, a news kiosk and a theatre.

A WIDE variety of new office equipment will greet visitors to the 1977 International Business Show — formerly the Business Efficiency Exhibition — to be held at the National Exhibition Centre, Birmingham, from October 11 to 20.

Its theme will be "The centre for wise business buying".

The Duke of Kent, who is to open the show, will arrive by helicopter to tour the exhibition

centre, and the organisers BETA, the Business Equipment Trade Association, are expecting over 100,000 visitors during the 10 days.

Some companies such as ICL, last seen nine years ago, are making an appearance again after a long absence from the previous BEE exhibitions.

The emphasis of product ranges is of the "automated office" concept, with desk-top

business systems and specialised furniture. Word processing equipment is also prominent.

Running concurrently with the exhibition will be a range of seminars organised by the British Institute of Management looking at "the office as the administrative nerve centre of a business".

This will consist of a programme of 24 seminars, covering three major topics: computer

techniques, office systems, and administrative management. Specific seminar topics will include distributed data processing, staff selection, training and development, management information, word processing equipment, and productivity in the office.

The seminars will take place in the Metropole Hotel, adjacent to the exhibition centre.

Univac will provide a specially

designed computerised information system for visitors. It will use U200 terminals sited in seven main information stands and provide answers to inquiries relating to more than 500 production categories on show. Hard copy print-out will be available.

Univac will also display its UTS 400 and UTS 700 intelligent terminals.

As the IBS is a focal point for the office equipment/business world, it is hardly surprising that some interesting new products are being launched there, including the Honeywell Page Printing System. This will compete with the IBM 3800, but is offline, uses different print technology and delivers and collates individual sheets of paper.

Using an electrostatic printing technique, the PPS operates under microprocessor control, reading seven or nine-track print image magnetic tape, and converting data from these to printable symbols. Copy can be generated at the rates of 140 or 210 pages per minute; equivalent to about 8,000, 12,000 and 18,000 lpm respectively.

It is aimed at all mainframe users, such as those with ICL, IBM and Burroughs equipment.

Hewlett-Packard will be launching a new desk-top computer system, the Series 9800 System 45. This features a 12-inch display, one of the new ANSI Basic applications software and an optional graphics package with high-speed hard copy output.

ICL has designed "Computer City", a new walk-around exhibition complete with precincts, a news kiosk and a theatre.

ICL's whole range of computer systems for small businesses and distributed processing applications will be featured, with the emphasis on the use of video terminals and direct data entry devices by unskilled staff.

Main items of the display will therefore be the 7500 Series of communication devices, and the 1500 Series of transaction systems. They will be driven by a 2903 Series and a System Ten 220 Series computer.

On the NCR stand will be a wide range of computer, point-of-sale and microfilm processing equipment. Among these will be the NCR 850 minicomputer to be shown with a line and matrix printer, a television repeater screen, and four VDUs.

From its PoS range, there will be the NCR 255, online to an NCR 728 minicomputer with a laser slot-scanner checkout, and the NCR 250/7600 for the first time with an OCR/A wand for product code reading. Complementing these will be the NCR 2060 and NCR 2135 electronic sales registers for the restaurant, and supermarket fluids respectively.

Word processing is now employed by many offices for the preparation of original documents, and one of the companies supporting the trend is IBM.

The IBM Word Processor 32 is

designed for offices with a high throughput of typed material and can handle input from most types of storage media. It is based on the System/32 computer and uses removable diskettes or fixed disc storage. Edited text can be edited and re-matted with new inputs.

The IBM Office System 6400 on show, comprises the 6400 Document Printer, the 630 Magnetic Card Typewriter and the Office System 6400. The 6400 is a high-speed printer which uses an ink-jet printer to produce documents, reports and address letters at up to 40 cps. It has a choice of four and languages as well as being able to communicate with other IBM machines.

The 6240 Magnetic Card Typewriter enables typists to revise their work before printing the final copy as well as printing it out at 55 cps, at the Office System 6400 terminals to deal with the case

Midland-based computer house Applied Computer Technology will celebrate the 500th anniversary of the 15th CompAot 5 service in the International Business Show where Henry Cooper presents a whisky decanter and glass.

needs of office correspondence. These include an ink-jet printer, a diskette unit and a VDU. Wordplex will be demonstrating three features of its word processing equipment geared towards improving ease of use and effectiveness.

These are Optical Character Reading, used to transfer data from a suitable printed document into the word processing unit; remote communication; and linking of word processing systems via telephone for the transfer of data and an interface to typewriters and other input devices.

Equipment for organisations with a requirement for word processing will be shown. Infotec 7000 word processing equipment will be on the stand. Infotec 7000 is a word processing system which can be tailored to the needs of individual users.

Infotec 3000 is a word processing system which can be tailored to the needs of individual users.

Monitors for all general ac-

IBS a launch pad for new products

From Page 16

processing control system, will be launched by Lanier. Micro-based, it monitors, analyses and controls throughput of word processing centres.

A new range of word processing equipment will be available from Computer Data and Machines. The range, entitled Contessa, comprises three basic models. First is the Contessa 2000, an 8K micro-based system with three mini diskettes or dual density floppy discs, a 55 cps daisy wheel printer and an independent keyboard.

The 6000 has a single line display for text entry and correction, but is otherwise the same as the 5000. Top of the range is the 7000, which offers a complete VDU and up to 64K main memory on mini diskettes

for this, and for Klenzie 2000 and 6600 models.

Altego Computers will launch a micro-based system that will run word processing software. And the recently released Avenger systems will be there, showing applications such as sales order processing, sales ledger and payrolls.

From the recently revived Compucorp, which at one time disappeared from the calculator/computer market, will come a new desk-top computer, the Compucorp 625. This has up to 64K storage, a mini floppy disc, a 40-column printer, a VDU screen and will use Basic and Assembler.

In its calculator range, will be the Compucorp 326 and 327, which both feature cassette storage.

A new office computer system is to be introduced by Datasab, showing the D12 MLC, which uses magnetic stripe cards for order entry and alpha-matching applications.

Texas Instruments will have its full range of calculators on show, from the TI 1000 at the bottom of the scale up to the TI 59 which is a hand-held programmable model.

Independent business computer manufacturer, CTL, will have a "hands on" presentation and demonstration at its stand. Visitors will be able to use terminals to run jobs on a CTL Model 8050 computer with 9.6 Mbyte storage, a line and serial printer. CTL's business systems are based on its Series 8000 line of products.

Offered by Computer Anellaries will be a low-cost data entry unit and a desk-top microcomputer.

Lunched this summer, the MAEL 1841 data entry device uses either cassette or diskettes, and can be user programmed. It incorporates a 4K micro, a VDU and a single diskette facility. The MAEL 2841 microcomputer is the first desk-top model in the range and incorporates 8K memory, a VDU, keyboard, twin floppy disc drives and a high-speed printer.

Tektronix is showing three computer graphics products; the 4006 low-cost terminal, the 4015-1 large screen terminal and the 4051 graphic computing system.

The exhibit is designed to demonstrate the versatility of these systems in general business applications.

Data capture will be highlighted by Data Recognition, which is showing the Datatag 4 and System 83.

Datatag 4 reads computer and hand-written bar marks on price tags to allow the tracking of stock movements.

The full range of Telexers from Saggiorn Electronics is being featured. These produce telex ready paper-tape from a standard IBM golf-ball, typewriter, an IBM MCII word processor or the IBM 82 memory typewriter.

Canon Business Machines is launching its first reduction copiers. Its Calculex range begins with the Calculex 8 liquid crystal display model through to the Multi 8 which has dual displays one above the other.

Making its UK debut from

Dymo Business Systems will be the TLR (Transaction Log Reader), a high capacity sales recorder produced after a joint research programme with a US oil company. The TLR allows substantial reductions in paperwork.

Data Maintenance, the on-site disc cleaning company, will have a full range of equipment and services on its stand, including the recently released DML 656 Disc Pack Inspector, as well as cassette and floppy disc cleaning equipment.

Optical character, mark and wand recognition systems are to be displayed by Kenrick and Jefferson's Business Forms Division. Emphasis will be on photo processing order systems, regular payment systems, and shop floor data capture.

A number of new floppy discs, including a minidisc, and new disc cartridges for IBM-type 2315 and 5440 systems, are among the products to be exhibited by Willis Computer Supplies.

Grading the Altego Computers' stand at IBS will be the woman racing driver Devine Galois.

Any person seated at this desk can do the work of three people.

Yes, one person to handle all customer accounts.

Calculate and complete invoices.

Prepare statements.

Process payroll.

Control the ledgers.

Control stock flow.

All these procedures completed at electronic speeds with electronic accuracy.

The same person is able, at the touch of a button to print out at computer speed all credit control figures and management on/off line data.

One person - not three - making a single input, triggers four routines simultaneously.

The 'desk' is one of Olivetti's 'A' series electronic accounting systems.

The same 'desk' that last year alone was chosen by over 13,000 U.K. firms to streamline their accounting.

For today, tomorrow and the future.

Do as they did.

Consider Olivetti first.

April 1978

For details of the A5/A6 and other systems in the Olivetti 'A' series, simply clip your letterhead or card to this advertisement and send it to: Peter White, British Olivetti Ltd, 10 Berkeley Square, London W1X 6AH.

Moore Paragon comes clean!

Carbon-interleaved listing paper has its problems. Handling it can produce smudging on forms, clothing and work areas.

That is, until MCP. Moore Clean Print. Carbonless print on forms. Coated paper that produces copies without carbons, without problems. MCP is clean, odorless, easier to handle and ready for instant use. Used at computer speeds, MCP gives clear, sharp, permanent print out images - on all copies. With no hammer shadow or smearing. The ultimate in readability.

You get longer computer runs - with less handling time, because there are no carbons to remove or dispose of; and from the security angle, there are no used carbon papers waiting to be read.

With no carbons, MCP is all paper - 100% usable. Cuts handling and entirely eliminates disposal costs. As an aid to ecology and environment, MCP makes better use of natural resources. It is 100% recyclable - with no waste disposal problems.

For efficiency and productivity in data processing, adding compares. MCP business forms - designed for the computer age.

WEST SUSSEX COUNTY COUNCIL
County Surveyor's Department
Computer Programmer—Transportation
(Post 131)
Salary Scale £3,388-£4,085 + £312 + Phone 2
There are many possibilities for improving the techniques of Transportation Planning. Some of our ideas include an investigation into the use of household regression for trip generation models, and a time series analysis of traffic count data. We are looking for somebody with an appropriate degree and experience of Fortran and IBM O/S to help us in this work and to co-ordinate the computing efforts of the engineers and technicians in the Transportation work of the County Surveyor's Department. A background in transportation planning would be beneficial, however, we would still be interested in hearing from people who are keen to broaden their experience in this field. Phone Roger Jones on Chichester 95100, ext. 585, to find out more about the job and our extensive computing facilities. Removal and resettlement allowances are available in approved cases plus temporary lodging allowance. Temporary accommodation may also be available. Application forms from The County Surveyor, West Sussex County Council, Chichester, Sussex, PO18 1RH. Tel Chichester 95100, Ext. 413/488. Closing date: 24th October, 1977.

COMPUTER MANAGER
Salary Grade PC1 (3-7) £4882-£5677
Plus Supplements £520 Approx.
This is a challenging position for someone to play an important part in the future development of the Council's Computer facilities, which includes: The Council's existing tape based ICL 1901, being replaced by a mixed tape/disc configuration which is due to be completed by September, 1978. The successful applicant should be able to demonstrate proven management ability and experience and knowledge of PLAN, COBOL and other suitable programming languages. Experience of disc and tape based systems, communications and the conversion of systems to high level languages is required. Housing accommodation may be available in approved cases and the Council operates a resettlement and removal allowance scheme. Casual car user allowance will be paid. Application forms are available from the Personnel and Management Services Officer, Chief Executive's Department, Council House, Cotton Road, Nuneaton, Warwickshire CV11 1AA. Closing date for applications 24th October, 1977.

NUNEATON

PROGRAMMER
We have a vacancy for a programmer to assist with the maintenance and development of systems operating on our IBM System/3. Although preference will be given to those with RPG II, experienced programmers with other languages will be considered. The work is both interesting and challenging, and the environment friendly and professional. There is scope for personal development and the opportunity to make full use of one's abilities. The Company is the largest independent company in the poultry production and processing industry. The Head Office is situated in a pleasant rural area. Application forms available from:
Group Personnel Manager
G. W. Padley Limited
Anwick, Sleaford, Lincs.

ASSISTANT EDITOR
To work on Systems International, a monthly computer magazine with offices at Upper Norwood. The job entails technical writing using knowledge of computer science, electronics, systems analysis, design engineering, software, etc., with an opportunity to learn about publishing. In the first instance apply in writing to: The Editor, Systems International, 108 Church Road, London, SE19 2UB. Tel: 01-771 3614.

MINI-REVOLUTION
SALES EXECUTIVE
Basic c. £6,000 + comm.
Fantastic opportunity to keep ahead by joining major VGL Group marketing a much sought after Mini-Computer (over 500 systems installed in 1976). Your market will consist mainly of OEM users where you can derive maximum sales from bulk buying thereby yielding an income in excess of £10,000 p.a. You will need to be confident and ambitious with sales experience and living in London or Home Counties. Start basic around £8,000 + O/S Car. Call ref. ST078.

30 EXECUTIVE (KINGSTON) 01-546 9473

SAUDI ARABIA

Whittaker Life Sciences Group is operating a Health Services Project for the Saudi Arabian Government which includes hospitals in Jeddah, Tabuk and Khams Mushayt. Due to the expansion of the project and the resulting requirements for additional computer systems, vacancies have recently arisen in the Jeddah Data Centre:
Systems Analyst To U.S. \$18,000 P.A. Tax Free
A minimum of two years experience in systems plus two years programming is required. Practical experience of IBM 404 or 4370 under DOS is essential and some knowledge of RPG II or BAL would be useful. The work will be initially on Supply, Finance and Employee-related systems.
RPG II Programmers To U.S. \$14,000 P.A. Tax Free
A minimum of two years programming experience is required using RPG II on IBM equipment. Knowledge of DOS, VS/PL/1 is desirable and some experience with another programming language would be considered an advantage.

The initial contract is for a two-year period and applicants must be single or married with no children. The contract includes travel and accommodation, six weeks vacation each year, free medical care and a gratuity on completion of one month's salary. The successful candidates will have the opportunity to save a considerable sum of money whilst enjoying the outdoor activities in the sunny climate of a stable Middle Eastern country. For further information and an application form contact:

Computing
Services
Association

NCR offers Systems Analysts rare opportunities in Marketing.

NCR's Commercial & Industrial Sales Division is where you'll find the scope you probably won't get if you simply stay with analysis.

Where you can use your business experience and flair for innovation to earn yourself, not only a highly competitive salary, but also, if you want it, a ticket on the route to hardware selling. Which is where the really big in come lies.

You will be involved in marketing and promotion of NCR systems for the manufacturing or distribution industries - liaising between the technical, where you've been, and sales, where you may wish to go.

To do the work, you need to have had plenty of

applications experience already - preferably all the way from system conception to completion. Basic business know-how is important, and any previous marketing experience a distinct advantage.

You will be thoroughly trained. You will receive full range of NCR company benefits. Since you will be expected to travel a fair amount, you will be paid expenses, too. But you will also be expected to live with in daily commuting distance of London.

Rare opportunities. Don't miss yours.

Write to Harry Redington, Personnel Controller, NCR Limited, 206 Maylebone Road, London, NW1 6LV

JBA**Technical Authors**

West of London up to £7000+
Our client seeks: WRITERS with several years experience in EDP ideally in a software environment; PROGRAMMERS with writing flair who want a creative satisfying job (career change); GRADUATES who may not have considered writing as a career. Ideal candidates will be highly personable and have an appreciation of real-time high level languages.
We also have vacancies in other areas offering excellent salaries and prospects.

Contact: Mike Creamer.

Software Specialists

London & Berkshire up to £6500
One of the largest software houses in Europe has vacancies for specialists to develop new software.
The projects include work for communications, operating systems, emulators and compilers and they require professional staff with 2 or 3 years experience in one of these fields. The client can offer a challenging environment and the chance to travel.
Salaries are negotiable according to experience.

Contact: Jim Baker

Minicomputer Programmers

London & Home Counties up to £6000
Our client, a large international organisation with several locations around London, has opportunities for programmers to work on minicomputer systems. Applicants must have at least two years experience in the development of small real-time applications, preferably with a commercial bias although technical backgrounds will be considered.
Excellent salaries and career opportunities.

Contact: Jim Baker

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

JAMES BAKER ASSOCIATES**International Personnel Consultants**

16 Maddox Street, London W.1. Tel: 01-491 4478

Programmer/Analyst

West of London - U.S.A. up to £6000
This manufacturer of technical micro-based business systems seeks a presentable and qualified person with M/CODE and ASSEMBLER experience and a background of micro-processor (or mini) based systems, together with recent involvement of both terminal hardware and communications software. Work involves a lot of customer liaison, occasional visits to the U.S.A. and possibly, later, world travel.
Relocation assistance and excellent salary for the right person.

Contact: Mike Creamer

COBOL Programmers

London (Central) up to £4500
Several of our clients are urgently seeking COBOL programmers, even with as little as 6 months post-training experience on any type of equipment. Positions offer excellent opportunities, variety of work, and definitive career progress to systems analysis.
Prospects, good salaries, and interesting work for competent people. Immediate interviews.

Contact: Mike Creamer

Systems Programmer

Herts c. £5500
A well established and expanding manufacturer wishes to appoint a software programmer whose main responsibility will be for the development and enhancement of executives and telecommunications software. It is essential to have a sound academic background and have spent at least three years working in a systems programming environment. Knowledge of a communication system would be an advantage.
Relocation expenses will be paid as necessary.

ata Computer Recruitment

A division of ATA Selection and Management Services, recruitment consultants to industry and commerce since 1962.

BRITISH AEROSPACE, RANK HOVIS McDougall, VOLKSWAGEN LTD AND I.C.I. -
What do these companies have in common?

They all use **REDIFON** COMPUTERS

These are just a few of **REDIFON**'s clients who have found that it pays to invest in the highly versatile SEECHECK and REDICHECK SYSTEMS. They have helped to make **REDIFON** one of the fastest-growing organizations in the computer business (1000% growth in the last 5 years!) Sales of the SEECHECK and REDICHECK SYSTEMS have broken all records this year and consequently more Territory Managers and Sales Support Personnel are required.

TERRITORY MANAGERS

c £14K p.a. + car

There are three main requirements for these positions:-

Firstly, you must know the Computer industry inside-out.

Secondly, you must be able to demonstrate that the sales track-record you have achieved over the past few years in hardware/systems has been good - very good.

Thirdly, you mustn't be scared to earn big money. Some of the Redifon sales team are earning well in excess of £14,000 p.a. this year.

Successful applicants can negotiate their own initial earnings package including salary and guaranteed commission; choose from a range of new Cortina 1600Ls or run their own car (for which they are very well compensated); and benefit from a personally tailored training scheme.

REDIFON's expansion plans embrace the whole of England and Scotland. Applicants of either sex are invited to contact their nearest branch of **ATA COMPUTER RECRUITMENT** to discuss these positions in more detail.

Geophysical Data Processors Libya

AGECO is a national oil company operating in the Socialist Peoples Libyan Arab Jamahiriya. We are primarily engaged in oil production from finding new sources to pumping the crude to local users and terminals, and have a daily output of nearly half a million barrels.

At present we are putting together a team of geophysical data processors, to be based at our head office in Benghazi, who are familiar with *Command II* or *Phoenix* system and routine. We invite applications for the following positions.

Senior Seismic Data Analyst

Applicants should have a University degree or equivalent with at least five years experience in field operations and an understanding of the principles of seismic interpretation. Job ref. No. GP/B1.

Seismic Data Analyst

As with the senior position, applicants should have a degree and a thorough knowledge of seismic work, but only three years experience are necessary. Job ref. No. GP/B2.

Seismic Computer Operator

You will be required to assist analysts in assembling data and will, on occasions, be given the responsibility of running various programmes. Applicants should have had two years relevant experience. Job ref. No. GP/B3.

All these bachelor posts carry extremely high salaries on which you are allowed to remit some 90% of the net. The successful candidates will be required to work on the basis of one week off for every seven full weeks work, with the company paying the return air-fare to the UK of each field break. There are numerous other very attractive fringe benefits.

Please write, quoting job reference number giving details of age, nationality, marital status and a brief résumé of career to:

AGECO

The Arabian Gulf Exploration Company (UK), 35-38 Portman Square, London W1H 9PH

**COBOL PROGRAMMERS****SURREY****to £5000 + + + +**

Commercial Union has recently installed its second 370/148 and needs to expand its team of young, lively programmers at the modern spacious offices in Whytelesta (near Croydon).

If you have two or more years Cobol, there could be a place for you. Assembler, TP and Database experience would be helpful although training will be given.

Salaries are up to £5000 plus house-purchase loans at preferential rates after a qualifying period, in approved cases.

Career prospects are excellent, and additional benefits include flexitime, free lunches, generous discounts on all insurances and much, much more.

ENERGY IN ACTION

want a tip?

here's what we want...

It's quite a task to co-ordinate and cope with the requirements of our retail branches, over 390 of them throughout the country. Our task is to distribute over 7 million items of merchandising annually—including books, stationery, toys, greetings cards etc. Swindon is our nerve centre; here our computers help us to provide the high-speed efficiency required for retailing at its most sophisticated.

Based on a large ICL 2970, two 1904's and a new planned distributed network of 2903's and 1500's, the Management Services Department of WH Smith and Son Ltd., are looking for additional staff at all levels to work on a number of interesting projects including a major distributed network and TP systems.

We are looking for experienced

SYSTEMS PROGRAMMERS SYSTEMS DESIGNERS BUSINESS ANALYSTS PROGRAMMERS

who are prepared to make a major contribution within this challenging field of work. In some instances, traineeships will also be available. We have openings for people with all grades of experience to whom we will pay realistic salaries of up to £5,787 p.a.

here's what you want...

Firstly of course, you want adequate reward for your labour. By that you don't just mean a good salary, but "all the benefits associated with a large and progressive company." What does that phrase mean? Is it just pension and sick pay schemes and four weeks annual holiday? You'll get all that of course, but we go far beyond that — because we're asking you to work with computers doesn't mean that we'll treat you like one.

WH Smith and Son have built up a reputation for believing that people matter, and that's not just idle talk. We don't consider that because you may be the newest recruit, you're the least important. We're offering secure jobs with almost unrivalled benefits. You'll be entitled to a 25% discount on most items in our stores, a staff restaurant and furthermore, we'll assist with relocation expenses.

Situated on the outskirts of a busy town amidst pleasant countryside, we are conveniently near the M4, and under an hour from London by the High-Speed Train.

You want an interesting job, with a good salary, an ideal situation, and tremendous benefits—Look no further!

tip the balance in your favour...

For further details and application form please contact:
The Senior Personnel Officer, WH Smith & Son Limited,
Greenbridge Road, SWINDON, WILTS, SN3 6LD or telephone
Swindon (0793) 36221. Extension 381 or 325.

01-627 2272

LEICESTER SYSTEMS MANAGER

**SALARY £5'000 to £6'000 pa. PLUS £1'000 pa.
TAX FREE CAR ALLOWANCE**

We are to recruit a Systems Manager for a well-established and respected Computer Services Company, to work at a senior level and provide a comprehensive interface with our client's customers, to cover all major aspects of systems implementation.

CANDIDATES SHOULD HAVE:-

- * In-depth experience of accounting procedures.
- * Ideally an accounting qualification.
- * Some experience of computing techniques, gained either within a formal data processing systems department or as a user.
- * The capability of presenting him/herself in a business-like manner.
- * A desire to be successful, and to be suitably rewarded for your efforts.

This is an attractive and well-paid post with a professional and dynamic privately owned Computer Services Company, with further considerable opportunity for real career progression.

Interested candidates should contact without delay:-

SYSTEMS ANALYSTS

COMMUNICATIONS DEVELOPMENT IS THE NAME OF THE GAME

North London

To £6'000

You could do a lot worse at this stage in your career than to be involved with on-line development in an ICL environment which includes DRIVER and Communications-Manager.

Combine this with

- * A flexible Project Team structure.
- * Development of a wide range of commercial systems.
- * Encouragement to contribute to the total project.
- * Early career progression to a Senior level.

and a highly challenging situation presents itself.

The main quality demanded can be summed up in one word — **POTENTIAL** — added to which your experience should include:-

- * 3 years' Systems Analysis
- * A sound technical background

If scope for initiative and a results-oriented environment sounds a future you would demand... you've found it.

EUROPE'S LEADING SPECIALIST RECRUITMENT CONSULTANTS

DISTRIBUTED PROCESSING CONSULTANT

an opportunity to develop expertise in advanced distributed processing development

**WEST LONDON
to £6,600 p.a.**

THE COMPANY: A secure and profitable international group.

COMPUTER FACILITIES: A large IBM 370, which provides interactive services to a number of locations. These include IMS/DC, TSO and APL.

PLANNED DEVELOPMENT: Some distributed processing experience has been gained, as a result of which a major distributed processing network incorporating a number of minicomputers and employing distributed database management is now planned.

DISTRIBUTED PROCESSING CONSULTANT: The person appointed will have the opportunity to contribute to the establishment of distributed processing strategy and to be involved from an early stage in the development and implementation of the corresponding proposals. He or she will work initially with consultants and will have contacts with appropriate parts of the group, both U.K. and overseas.

Initial tasks will include participation in the evaluation of alternative equipment, liaison with systems programmers on planning and implementation probably of SNA, and contributing to distributed processing standards.

SUITABLE CANDIDATES: May come from a variety of backgrounds and it is not expected that any individual will have all the desirable skills and experience. A keenness to acquire new skills is therefore essential, as are a sound technical background, high interest in distributed processing and the ability to communicate effectively with all types of D.P. staff.

Experience of data communications and/or minis is desirable, perhaps gained in the capacity of systems programmer or by someone working with systems programmers on a minicomputer implementation project.

IF YOU ARE ATTRACTED BY THIS OPPORTUNITY AND CONSIDER YOU COULD FIT THE SPECIFICATION, WE WOULD BE PLEASED TO HEAR FROM YOU, QUOTING REF. CW915.

24-hour answering service

IT'S NOT WHAT YOU KNOW, IT'S WHO YOU KNOW...

and in this business, we know a lot of people: users, consultants, bureaux — in fact, companies from all areas of industry are asking us for experienced personnel at all levels. With our contacts we can put you in touch with the right people regarding the job you're looking for. And at the moment, our clients are seeking more people than ever before. We could fill this whole space with brief, one-line specs; but rather than do that, we have briefly detailed a sample selection below. But remember, we have many, many more jobs than advertised here, in many different locations. So, you could take a lot of the hard work out of job hunting by giving us a call.

BUCKS.

A small but very well known company located in a pleasant rural area currently runs 370 DOS/Vs. They need an ANALYST/PROGRAMMER with 2 years' COBOL or RPGII and 18 months' commercial systems design. Work involves design and programming straightforward commercial systems. Salary is in the range up to £4500 p.a.

LONDON

A Honeywell user, international and very large in its field, has an installation in the West End. They are able to offer to an ANALYST/PROGRAMMER the chance of developing further into systems with the eventual aim of becoming a pure analyst in the short term. You will need to know COBOL; although the prime requirement is systems experience. The job entails development of new commercial systems with a small amount of maintenance. Salary is up to £4500 p.a.

WEST ESSEX

COBOL PROGRAMMERS and ANALYSTS are sought by this company currently in the process of changing hardware. Systems are presently being developed for the latest type of Honeywell machine and useful experience can be gained. PROGRAMMERS are welcome with 12 months' or more on any COBOL; and ANALYSTS should have 3 years' commercial systems design. Salaries are very good — up to £5000 for Programmers and to £6000 for Analysts.

CONTRACTORS

We have a fairly continuous requirement for experienced freelance PROGRAMMERS and OPERATORS. If you are currently free, or will be so shortly, please phone us for further information.

Contact Danny Boreham or Phyllis Irwin on 01-240 3223 or write to them at
COMBYTE, SUITE 74/76, 12/13 HENRIETTA STREET, LONDON WC2E 8LH
Employment Agency License No. SEA2648

ESSEX

We have a company situated in NE Essex who have requirements for a variety of people. They are using a large IBM OS configuration running both batch and TP applications and can offer a valuable experience in various fields. On the PROGRAMMING side, they would like us to find Programmers with 1 year or more in an IBM-type Assembler or PL/1. Assembler people will be given the opportunity of learning PL/1 or perhaps joining a software group at a later stage. Opportunities to diversify are really good. They also need experienced ANALYSTS with 3 years' commercial systems design, and ideally some IBM knowledge. If you have experience of financial-type applications, so much the better. In addition to an attractive salary, the offices are new and in a pleasant part of the countryside.

SURREY

A small consultancy with an extensive workload needs capable RPGII PROGRAMMERS who enjoy the non-routine and well-rewarded life consultancy has to offer. There are also vacancies for IBM COBOL people. Variety of work, salary to £6000 p.a. and a COMPANY CAR after a suitable period make this an attractive proposition.

CLIENTS

If you're having difficulty in finding people, remember the answer to a lot of your problems could be as far away as your telephone.

The Performing Right Society Ltd.
(an association of composers, authors and publishers of music)

LONDON INTERVIEWS OCTOBER 10-13
Expenses reimbursed

Senior Programmer -Team Leader

If you are a senior programmer or an experienced programmer, and are ready to add team leadership to your career development, then you could be the person that we are seeking.

The team is at present engaged in developing a new pharmaceutical coating and production system using COBOL and I.B.M. equipment. Within our progressive computer department you would be working directly under the Project Leader or Season.

This unique appointment requires a person with wide programming experience and the ambition to develop supervisory management skills.

The position offers a salary to match the responsibility and a range of benefits including a contributory pension scheme, profit sharing scheme, staff discount facilities and assistance with relocation expenses where appropriate.

Ready for a position like this? Then please write for an application form to: J. Hallen, Employment Manager (Commercial).

The Boots Company Ltd.,
Head Office, Garsington, Nottingham, NG23AA.

MYRIAD OPERATIONS

Computer Personnel Consultants

OPERATOR

N. LONDON

To £3500

A major manufacturing and marketing organisation is currently seeking to recruit an additional operator for its small yet sophisticated computer centre. A variety of main-frame applications are processed revolving around a mini-based communications network.

You should be able to offer eighteen months' experience on any machine, and be capable of demonstrating considerable initiative since you will be required to work with a minimum of supervision.

In any period of three weeks you will work two day shifts and one evening shift, covering the hours between 9 a.m. and midnight. In addition to the commencing salary a comprehensive range of fringe benefits will be offered, including a staff restaurant and a company product discount purchase scheme.

This is an excellent opportunity for you to progress and join a close-knit team in a small, efficient installation.

Please telephone for a confidential discussion or write:
30 Fleet Street London EC4Y 1AA
01-353 5868

SYSTEMS PROGRAMMING SUPERVISOR

Northampton

The company is a member of the Brooke Bond Liebig Group and the position is at its head office in Northampton.

The Supervisor will be responsible for the operation of the company's new IBM Systems 3 installation and will report direct to the Chief Accountant. Several years' commercial experience and a good knowledge of RPG II is essential.

The person appointed will be the Senior Computer Specialist in the company, and will have ample opportunity to try out new ideas in this expanding field in the company's operations.

The position will be attractive to anyone qualified who is currently earning about £4,400 p.a. and is looking for an opportunity to step out into a new environment and run his/her own show.

The position offers attractive fringe benefits including membership in the Brooke Bond Liebig Pension Scheme. If necessary, some assistance with removal expenses will be available.

Applicants should please send a detailed career history to: Mr. S. Gowan, A.C.A., Chief Accountant, Baxters (Butchers) Ltd., Albion House, Victoria Promenade, Northampton NN1 1HB.

LONDON TRANSPORT

Analysts and Programmers

£6,500/£5,000 Oil Industry

Dowell Schlumberger offers specialist technical services to the oil industry world-wide. Part of a major international group, it has a small but powerful computer centre in London. The configuration is an IBM 370/125 256K (which should shortly be up-graded) with local and remote VDU's. Applications are a range of management and financial information systems. Some are already highly sophisticated; others need to be devised and implemented to meet the demands of user departments throughout the world.

These are opportunities for competent Analysts and Programmers to move into a live environment offering considerable challenge and job satisfaction, as well as career progression. Analysts must have big-company TP experience under DOS/VS, and Programmers must be capable of working as expert members of a small team. Salaries will start at £5500 for Analysts and £5000 for Programmers. There are excellent continental standard benefits including an annual bonus.

We invite you freely to telephone (01-629 1844 at any time) or write to ASL Recruitment Advertising, 17 Stratton Street, London, W1X 8DB, for further information and an application form, quoting ref. FY. 7650.

DOWELL Schlumberger

SITUATIONS WANTED PROGRAMMER

(HND in Computer Studies with Distinction)
wishes suitable positions abroad. Thorough knowledge of COBOL, PLAN, FORTRAN, BASIC, RING and FILETAB. Experience on BAK ICL 1902T operating under GEORGE 3 and MAXIMOP. Also has recognised commercial management qualification and experience.
Write to Box 1897, Computer Weekly.

BURBECK COLLEGE PROGRAMMER

The Department of Statistics has a vacancy for a graduate programmer with some statistical knowledge to support research and teaching, as well as computing advice and run the departmental computing facilities, using a 387/7000 system and a Wang 3300. Main languages FORTRAN and BASIC.
Initial salary in the range £2025 to £2385 plus London Allowance of £450.
Application forms and further details from the Deputy Secretary (CV), Burbeck College, Maitland Street, London, W51E 7HQ.

EXPERIENCED CORAL OR FORTRAN PROGRAMMERS

required in West London and Hants. The work involves the design and implementation of scientific data analysis programs on mini computers. Applicants should be capable of working largely on their own initiative.
Reply with full details of programming experience and salary required to: 27 High Street, Balfour Wallace, Sevenoaks, CR10 1AT.

Programmer/Analyst

McEvoy Oilfield Equipment manufacture wellhead assemblies and associated equipment for application in oil and gas fields throughout the world. The Company is pleasantly situated in the Cotswolds, between Stroud and Nailsworth and employs 420 people.

We now require a Programmer/Analyst to join a small DP team and report directly to the Information Systems Manager.

Applications of the recently installed D.P. functions are primarily involved within the manufacturing control area including data base creation, inventory control and material requirements planning.

Applicants should preferably be educated to HND/Degree level, and must have had at least 2 years' programming experience (preferably with ANS cobol and/or BAU) and a minimum of 1 year's analytical experience. Knowledge of BOMP/DBOMP or CFMS will be advantageous as would OS/JCL experience.

Fringe benefits include relocation expenses where appropriate.

Letters of application should be brief but include age, present position and salary. A comprehensive application form will subsequently provide full scope for details.

Applications should be marked "Confidential" and addressed to The Personnel Manager, McEvoy Oilfield Equipment Ltd, Woodchester, Stroud, Glos. GL6 6EY.

ANALYST/PROGRAMMER RPG II

CITY

A major financial company with offices throughout the world is seeking an Analyst/Programmer to develop an unusual and interesting application using distributed minis, including IBM System 32s, linked to their main IBM installation in the City.

Joining a small team, the Analyst/Programmer will be able to partake in all issues of the systems development to successful implementation.

Excellent prospects of career progression are offered to candidates with sound RPG II programming experience. Knowledge of another language and on-line processing would be an advantage although training will be provided where necessary.

Excellent conditions of employment include Non-contributory Pension, BUPA, LVs and four weeks' holiday.

PROGRAMMING CONSULTANT 3-4 years' COBOL

W. LONDON

UP TO £5500

We are seeking a Programmer or Analyst/Programmer keen to accelerate his/her career by a move to Team Leading. You will be expected to play a major role in the development of new systems, being responsible for the programming and implementation of projects from specification to overall testing.

The person appointed will have in-depth knowledge of COBOL with an appreciation of commercial data processing. Previous supervisory experience is not essential although a commitment to maintaining high standards of coding and documentation are required.

The Company, a subsidiary of a major international group, offers a friendly environment with the exciting prospects of allowing your career and responsibility to grow with the Company. The offices are conveniently situated to both underground and main line stations.

SYSTEMS ANALYST / PROJECT LEADER

S.W. LONDON

c. £5750

This is an ideal opening for an experienced Analyst to lead a project team of seven development staff installing a variety of applications on our client's new main-frame.

The Systems Analyst will hold responsibility for planning and scheduling complete systems installation and ensuring that team members adhere to standards and obtain the maximum use of modern techniques using the latest equipment available.

Candidates should have implemented at least one system from inception to completion and be capable of leading a project team.

This is a permanent appointment in a progressive and expanding organisation offering the successful candidate an excellent career path.

Benefits include Pension Scheme, Flexitime, four weeks' holiday and LVA.

PROGRAMMERS

CENTRAL LONDON

FROM £4000

If you are able to offer from around twelve months' programming experience in either COBOL or an assembly level language you may well prove a suitable candidate for one of the current programming positions in our client's installation.

The department is currently undergoing a programme of expansion and can offer you the opportunity to become involved with a variety of interesting projects.

New members of the department will be attached to project teams where they will gain valuable experience working on both the developing of new systems and the maintenance and enhancement of existing systems.

The Company offer a very competitive salary range which is further enhanced by a comprehensive benefits package.

Please telephone for a confidential discussion or write to:
30 Fleet Street London EC4Y 1AA
01-353 5868

DISTRIBUTED PROCESSING SYSTEMS

SUPPORT MANAGER

to £7,000 + Benefits

MIDLANDS and LONDON

The modish concept of decentralising computing power among small remote processors has been the essence of this clients market strategy for some years now. Their not inconsiderable reputation as one of the leading manufacturers of mini computers for the commercial market place is based upon the technical performance of a first-class product range, backed up by a thoroughly professional support team.
They are looking for two experienced and mature people to strengthen the support groups. These positions require experience of a support function within a manufacturer or systems house; the ideal candidates will have had some exposure in a team leading/project managing role. Experience of intelligent distributed systems or real time minis is desirable. One position is BIRMINGHAM based and carries responsibility for pre- and post-sales support in the area.
The other position is LONDON based and will concentrate on pre/post sales support to Major Accounts and Government clients.

Stone Executive

64-65 North Hill, Colchester, Essex.

ANALYST / PROGRAMMER

salary £5000-£6000 + COMPANY CAR

Join a dynamic Midlands company marketing DEC and other minicomputers on a turnkey basis. We seek to recruit a person with considerable experience in commercial applications. Pre-Sales work is an important part of the job — some experience of this, or plenty of enthusiasm, will be needed. We provide a company car, pension, insurance and bonus scheme.

(For the Job Specification, contact Andrew Reeves, Managing Director, 021-236 6234. (2 p.m.-7 p.m.))

PROGRAMMER IBM SYSTEM 3

The Dunn & Wilson Group Ltd. has a vacancy for a Programmer to undertake a range of projects in the continuing development of the Company's portfolio. The Group is a leading company in the library supply and bookbinding industry and is actively upgrading its computer installation to a central System 3 model 15 for the introduction of on-line applications. The successful applicant is likely to be in the 20/25 age bracket and have at least two years' programming experience.

Write with curriculum vitae to: Mr. L. J. Wolfe, M&CB, The Dunn & Wilson Group Ltd., Berris Road, Grangemouth, Stirlingshire FK3 8X.

Programmers going places!

£3395-£4615, great prospects, relocation assistance to a superb port of England...

Go places with a computer unit amongst the foremost in local government right now and where enormous expansion is inevitable during the next few years. In a showpiece area of Kent — yet within easy reach both of London and the Channel ports.

It could be that 4th generation will soon be with us — we are already highly powered with two 1804s plus over 35 terminals. Peripherals switch into either machine, one of which performs mainly on-line work, the other mainly batch.

You will benefit from joining in many ways. With swift expansion certain, progress to Analyst Programmer could be well within your grasp. Tremendous work variety is already established. New training courses now being devised will offer a further career boost. And the relaxed and wooded surroundings make working in this exciting environment even more enjoyable.

If you have COBOL and preferably PLAN/GEORGE III experience find out more. Phone Bob Griffiths at West Melling (0732) 845846 or write immediately for your application form to The Computer Manager, Kent County Council, Computer Unit, West Melling, Kent.

Experienced Programmer

For New ICL 2903 Installation

The Company, which is jointly owned by ICI and Hargreaves Group Limited, has operated a growing range of commercial programs over a 7 year period on a turnkey basis. Early in 1978 it is now ICL 2903 machines to be introduced. The configuration includes 28K store and 2.05 30 disc units. Present programs are written in PLAN / COBOL. An experienced programmer is required to maintain and develop existing programs, and to extend computer use into new areas.

The requirements are:—
1. At least 3 years' experience in an in-house environment — preferably 2903 or small 1900 users.
2. Experience in both PLAN and COBOL.
3. Ability to communicate clearly with non-technical managers is essential as the position will involve acting as the Administration Services Manager in development work and there will be considerable involvement with user departments.
A progressive salary will be offered in accordance with the Company's job grading scheme, together with good working conditions in our office in the centre of York. Four weeks' holiday, plus contributory pension scheme.

Apply in first instance to: G. Hirst, Personnel Manager, HARGREAVES FERTILISERS LIMITED, Stiverside Bridge, York YO1 1DR

If you want to grow talk to

Hargreaves

PROGRAMMER WITH SYSTEMS POTENTIAL

c. £4250 per annum

Major Oumore International is a manufacturing company supplying machinery to the packaging industry.

The Company now needs a programmer to join its small Data Processing Department. He or she will work closely with the O.P.M. and be responsible for the running of the department in his absence.

Applicants should have at least 18 months' experience using RPG II in a commercial environment. A knowledge of IBM System 3 equipment would be preferred. The ability to work with minimum supervision and an open-minded attitude to one's work are essential.

Company benefits include: four weeks' annual holiday, pension scheme, free life cover, subsidised canteen and parking facilities.

For further details and application form, please contact: The Personnel Department, Major Oumore International Ltd., Abbey Road, Park Royal, London NW10 7RD. Telephone 01-965 4021.

SENIOR COMPUTER OPERATOR

£3,381 - £4,084 plus £287 shift allowance plus 8% pay supplement (£182 minimum - £208 maximum). The Computer Services at the City of London Polytechnic provides comprehensive continuing facilities for ILEA Polytechnic, Schools and Colleges. Equipment installed currently consists of a large DEC System 10 computer with over 100 remote terminals, and two smaller Hewlett Packard Systems. Applicants are invited for a vacant post of Senior Computer Operator, to join a small operating team working on a two shift basis. Preference will be given to applicants with operating experience on a DEC-10 and supervisory experience in a large multi access installation. For further details send an application form, please apply in writing to the Assistant Secretary, City of London Polytechnic, 117/118 Mountbatten, London EC3A 7DU, by 19th October, 1977.

BELGIUM

We are seeking Programmers in following major areas:—

1. **HARDWARE TEST SUPPORT** to aid in the preparation of Software proving a mini computer system — the tests will be written in a real time variant of PLI. Program production will be undertaken on an IBM 370/158 configuration under OS MVS using TSO. Some mini experience in a real time environment would be helpful as would a knowledge of Assembler. Ref. DCO 41077 A.

2. **INTEGRATION TEST PREPARATION (MINI BASED)** General knowledge of Mini applications in a real time environment. Ideally familiar with CII/CIMSA) able to debug at machine level on a teletype. Programs written in a real time variant of PLI. Experience of working under pressure is essential. We require practical individuals with the ability to apply fixes and to get a computing system up and running with minimum delay. Ref. DCO 41077 B.

3. **INTEGRATION TEST PREPARATION (ON HOST IBM MAINFRAME)** required up-to-date IBM JCL experience on a 370/158 with MVS running TSO. A knowledge of PLI together with some experience of mini computers would be desirable. Ref. DCO 41077 C.

4. **SOFTWARE SUPPORT** to aid in preparation of software (written in mini assembler) to input data from special peripherals — familiar with a mini computer Assembler language in a real time environment is essential and some exposure to Fortran and IBM JCL is desirable. Ref. DCO 41077 D.

Apply in first instance to: O. RYAN (01-862 4068) Overseas Recruitment Consultant Employment Business Scotland Howard Organisation Ltd, Menor Way, Bournemouth, Hants.

MARTON ASSOCIATES

is proud to present

"GET OUT OF TOWN" WEEK

dedicated entirely to all Computer Programmers who are sick to death of commuting into London every day. If you would prefer to work locally, consider the following:

MIDDLESEX — Senior Analyst/Programmer with IBM and/or UNIVAC COBOL and BAL. Outline prospects to management and excellent salary.
MID ESSEX — COBOL programmers with experience on any miniframe for expanding 2900 installation. Salary to £4,500.
WEST SURREY — RPG II and/or COBOL programmers for small friendly consultancy. Must be mobile. Salary no problem for the right people.
HERTS/BUCKS BORDER — Programmers/Analysts with 2 years' + mini real-time software experience to work on intelligent terminals. Salaries to £8,000 p.a. CONTRACT PEOPLE also required for this one.

If none of the above jobs quite fit the bill, why not give me a ring anyway. I have vacancies all over the Home Counties and Southern England in general.

THE SALES BIT

The ideal salesman

TO many computer people outside of selling, a salesman is a peripheral employee who intersperses the indulgences of expense account living with the pleasures of articulate deception.

He is a ruthless exploiter of the uninformed, motivated only by sales commission. He is brash, insensitive and a born survivor. He is overpaid and underworked. He is a speculation, acceptable only within an expanding market.

On the other hand, the salesman may see himself as a pioneer at the "sharp end" of a company which must expand or die; a solitary traveller who must balance the insatiable demand for expansion with the frustrations of customer dissatisfaction and an inadequate product portfolio.

He, unlike other employees, is measured by his day to day performance — quotas, targets, salesplans, commission structures, and reporting systems.

He must keep a level head despite the financial and emotional boost of success and the cost and condemnation of failure — while the product, it seems, goes on for ever. At best he is yesterday's hero.

Both these descriptions are emotional and extreme, but it is difficult, if not impossible, to specify the qualities and aspirations of the successful salesman or even saleswoman.

The ideal computer salesman is unlikely to exist.

He should be industrious, sensitive, creative, objective, perceptive, attentive, determined, self-disciplined, self-motivated, self-organised, self-analytical, intelligent, articulate, fit, politically aware.

He should have commonsense, initiative, tenacity, courage, ambition, product knowledge, market knowledge.

While the accumulation of all these attributes would perhaps be a suitable qualification for becoming the New Messiah, they are qualities which are regularly called upon within the sales and marketing situation. For this reason even the very best salesmen fail from time to time.

However, there are some basic qualifications: without hard work, common sense, product knowledge and personal fitness the salesman is impotent; and without the salesman, so is the company.

This weekly column is for sales and marketing people. It will be predominantly devoted to discussions on random topics related to the basics of selling and marketing.

It is not intended to provide a few hints and reminders, but also act as a forum for comment and a clearing house for sales and marketing problems of all kinds.

Much of what will be said has been said before, and what is new will be commonplace anyway. But like the man said, "I know you know it, but do you do it?"

The Trader

Systems Consultants up to £8,000

URWICK DYNAMICS have been computer consultants since 1958 and continue as leaders in the field.

We are rapidly expanding our work overseas particularly in Europe and in Central and South America.

To assist in this expansion we are seeking Systems Consultants to join us on either a long or short term basis.

Applicants, in the age range 25-29, should be graduates or have an accountancy qualification. They must have had at least three years experience of Systems Analysis and preferably have some knowledge of one or more of the following:

- Operational Research
- Minicomputers
- Database design

Successful candidates will be required to travel extensively abroad and ability to work in a major European language would be an advantage.

Salary and other benefits will depend on the choice of engagement which could be either a fixed long or short term contract.

This is an exciting opportunity to gain experience of advanced systems design on terms to suit an individual's career development aspirations.

For an application form, men and women are invited to write or telephone in confidence to Geoffrey Lygoack at the address below (telephone 01-229 6742) quoting reference no. 578/CW
